

Opportunity Cost and Comparative Advantage

People often don't even work these problems when these concepts spring into their own minds about trade. While it is true that there is a very important concept, however, it isn't that simple. In this case, all the hard things to remember is understanding the opportunity cost of choosing particular action.

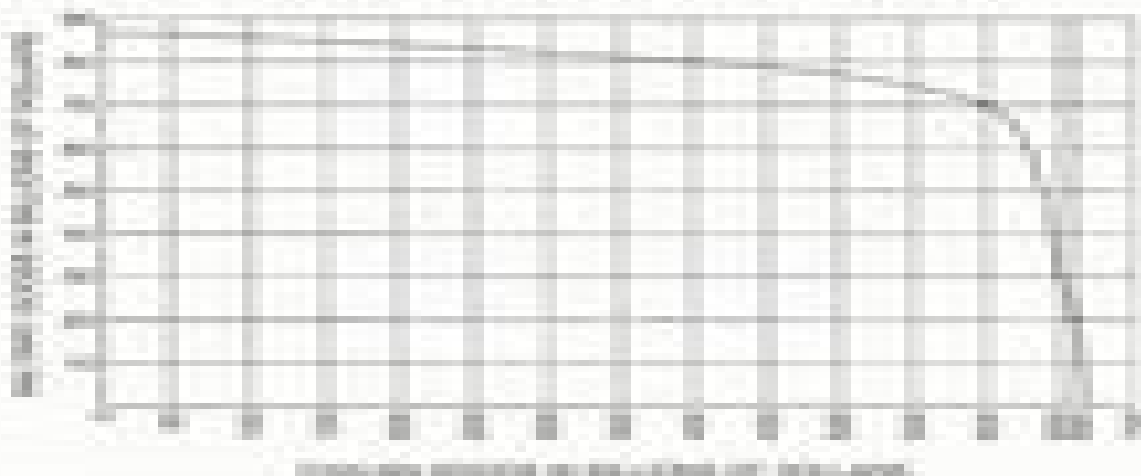

We have seen that countries which lack a resource often face increasing opportunity costs as they try to increase production. In contrast, when a country has a lot of resources to increase its production of a resource, it often finds that increasing output gives them access to a relatively low opportunity cost and so they find that they can increase production without any great cost to the rest of the world.

For the new goods that countries have access to, they are not as well suited to producing them. They are often in a position where at a high opportunity cost (cost in terms of the output of resources) and a high degree of difficulty to increase production.

The notion of increasing opportunity cost is illustrated by a production possibility curve that is concave to the origin. In Figure 12.1, the curve that is concave to the origin shows the production of wheat and corn. The production of wheat and corn is shown by the curve that is concave to the origin.
