*The Magic of Numbers* Benedict H. Gross, Joe Harris, 2004 The Magic of Numbers was written with two goals in mind first to introduce the reader to some of the beauty of numbers the patterns in their behavior that have fascinated mathematicians for millennia and some surprising applications of those patterns second and equally important to teach the reader something of the mathematical mode of thought the feeling of exploration excitement and discovery that are part of how mathematics is developed The book written originally for the course Quantitative Reasoning 28 that the authors developed and taught at Harvard draws the reader into the content through an engaging and informal writing style Example driven it reduces to a minimum the abstract notation and formal argument that often creates a barrier between mathematicians and students focusing more instead on the experimental aspect of the subject Above all the authors communicate to the reader a sense of the joy and fascination of learning mathematics Additional exercises problems and sample exams are available at [www.prenhall.com/gross](http://www.prenhall.com/gross) Principal topics include Counting and basic combinatorics with applications to probability and games The arithmetic of natural numbers the Euclidean Algorithm and the unique factorization theorem Modular arithmetic including Fermat's Theorem Euler's Theorem and how to take powers and roots Codes how the special properties of ordinary and modular arithmetic in combination allow us to construct the public key codes that help make data transmission secure

**Notes On The Theory Of Choice** David Kreps, 2018-05-04 In this book Professor Kreps presents a first course on the basic models of choice theory that underlie much of economic theory This course taught for several years at the Graduate School of Business Stanford University gives the student an introduction to the axiomatic method of economic analysis without placing too heavy a demand on mathematical sophistication The course begins with the basics of choice and revealed preference theory and then discusses numerical representations of ordinal preference Models with uncertainty come next First is von Neumann Morgenstern utility and then choice under uncertainty with subjective uncertainty using the formulation of Anscombe and Aumann and then sketching the development of Savage's classic theory Finally the course delves into a number of special topics including

de Finetti's theorem modeling choice on a part of a larger problem dynamic choice and the empirical evidence against the classic models
