Figure 1-16 is a drawing of a longitudinal section of the humerus. Within the humerus, there is a central, hollow, cylindrical structure called the medullary canal. The medullary canal is surrounded by a thick, dense layer of bone called the compact bone. The compact bone is composed of many small, repeating units called osteons. Each osteon is a cylindrical structure that has a central canal called the Haversian canal. The Haversian canal is surrounded by a layer of bone called the lamella. The lamella are arranged in concentric circles around the Haversian canal. The Haversian canal is connected to the blood supply of the bone by a network of blood vessels called the vascular system.
