Thomas,2012-12-06 This book is about longitudinal research in Human Computer Interaction HCI Since the early 1980s
much has been understood about the problems of novices learning new systems as well as the performance of expert users
However there is still a lot to discover about the transition from novice to expert and its implications for the design of
systems For instance How long does it take to become expert Does early experience of a system have any effect on
subsequent flexibility How can flexibility and long term learning be promoted Are there strong constraints that should be
taken into account in the design of adaptive systems Longitudinal research in HCI has been rare for many reasons There is
always pressure to obtain results the current climate of short termism does nothing to promote a longer perspective The field
of HCI itself is changing fast and there are often virgin technologies to explore which can be more ex citing and potentially
profitable than research aimed at basic understanding There is also a possibly mistaken view that longitudinal studies are
always inherently expensive The present volume grew out of a project at Sydney University The very first ideas were
discussed in 1989 In 1991 data logging started of a mainly undergraduate population using a Unix based editor sam Pike
