Bivariate Data, Scatter Plots and Correlation

A Scatter plot is a graph of ordered pairs that represents data.

Each of the ordered pairs gives information about two variables.

The study of two related variables is called bivariate data analysis.

Putting the points from a bivariate data set on a scatter plot can show if there is an association between the two variables that is not easily seen in a table.

Correlation

A scatter plot can show a trend or relationship between the two variables.

This relationship is called an association or a correlation.

Trend Line

The trend of the data is modeled by a straight line through the data points.

The trend line is used to describe the relationship shown in the graph.

Positive Correlations

As the X values increase,
the Y values increase.

The points on a scatter plot
go upwards
from left to right.

Negative Correlations

As the X values increase,
the Y values decrease.

The points on a scatter plot
go downwards
from left to right.

No Correlations

Data point
are scattered

and points show
NO association.

Date 12-01-15

Creating Scatter Plots and Describing the Correlation

Example One: Comparing the number of pages in paperback books and the price of the books.

# of Pages	100	200	300	400	500	600	700
Price (\$)	2.99	3.99	4.99	5.99	6.99	7.99	8.99

1) Create a graph and label the X axis and the Y axis.

X represents # of pages
Y represents total price

2) Graph the data from the table.

3) Draw a trend line and interpret the data.

Interpret the Data

The trend line shows an upward trend.

So the data represents a positive correlation.

As the # of pages increases, the total price of the book increases.

This means: The more pages a book has, the more it costs.

Example Two: Comparing the number of hours people spend watching TV and the hours spent outside.

Hours watching TV	20	35	15	1	25	10	5
Hours spent outside	10	30	15	25	15	20	35

1) Create a graph and label the X axis and the Y axis.

X represents # of hours
Y represents hours spent outside

2) Graph the data from the table.

3) Draw a trend line and interpret the data.

Interpret the Data

The trend line shows an downward trend.

So the data represents a negative correlation.

As the hours of TV watched increases, the hours spent outside decreases.

This means: The more someone watches TV, the less time they spend outside.
