Numerical Correlation between Impact Factor and Web Ranking of Electronic Scientific Journals Using Regression Analysis Giorgos Kouropoulos, Γιώργος Κουρόπουλος, 2017-12-15 The present study attempts to examine the numerical correlation between web ranking of electronic scientific journals and impact factor of these journals using the method of regression analysis Regression analysis allows the option of investigating and predicting the numerical relationship between website ranking of scientific journals on the World Wide Web and the value of impact factor of the journals A sample of 57 publishers with 6 272 scientific journals and 50 standalone scientific journals was analyzed during research procedure In this study two different indicators about websites classification on World Wide Web were examined separately for 57 publishers and 50 standalone journals Alexa rank and Statscrop rank The electronic databases through the internet constitute the main information resources of this study about the impact factors The general conclusion that arises is that the impact factor of electronic scientific journals illustrates a very strong positive correlation with classification of websites on the World Wide Web Furthermore it is concluded that the change of web ranking as a function of impact factor is governed by a Gaussian function or rational function with lower Pearson coefficient and presents non linearly correlation Even if there is very strong correlation between impact factor and web rank for electronic journals the prediction of impact factor from web rank is not possible and presents many divergences Multidimensional Journal Evaluation Stefanie Haustein, 2012-04-26 Scientific communication depends primarily on publishing in journals The most important indicator to determine the influence of a journal is the Impact Factor Since this factor only measures the average number of citations per article in a certain time window it can be argued that it does not reflect the actual value of a periodical This book defines five dimensions which build a framework for a multidimensional method of journal evaluation The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011 *Clinical Informatics Board Review and Self Assessment* Scott Mankowitz, 2018-02-08 The book offers an introduction to all the informatics concepts that are represented on the Clinical Informatics Board Examination The core and direction of this book is to mirror the model of clinical informatics which is used by the American Board of Preventive Medicine to create their exam Unlike any other text on the market the book includes simulated exam questions to help the reader asses his knowledge and focus his study Clinical Informatics Board Review and Self Assessment is a thorough practical assistant to refine the reader s knowledge regarding this youngest and possibly broadest fields of medicine Beyond Power Transitions David C. Kang, Xinru Ma, 2024-10-08 Questions about the likelihood of conflict between the United States and China have dominated international policy discussion for years But the leading theory of power transitions between a declining hegemon and a rising rival is based exclusively on European examples such as the Peloponnesian War as chronicled by Thucydides as well as the rise of Germany under Bismarck and the Anglo German rivalry of the nineteenth and early twentieth centuries What lessons does East Asian history offer for both the power

transitions debate and the future of U S China relations Examining the rise and fall of East Asian powers over 1 500 years Beyond Power Transitions offers a new perspective on the forces that shape war and peace Xinru Ma and David C Kang argue that focusing on the East Asian experience underscores domestic risks and constraints on great powers not relative rise and decline in international competition They find that almost every regime transition before the twentieth century was instigated by internal challenges and even the exceptions deviated markedly from the predictions of power transition theory Instead East Asia was stable for a remarkably long time despite massive power differences because of common understandings about countries relative status Provocative and incisive this book challenges prevailing assumptions about the universality of power transition theory and shows why East Asian history has profound implications for international affairs today

University Rankings Jung Cheol Shin, Robert K. Toutkoushian, Ulrich Teichler, 2011-06-06 This ground breaking and exhaustive analysis of university ranking surveys scrutinizes their theoretical bases methodological issues societal impact and policy implications providing readers with a deep understanding of these controversial comparators The authors propose that university rankings are misused by policymakers and institutional leaders alike They assert that these interested parties overlook the highly problematic internal logic of ranking methodologies even as they obsess over the surveys assessment of their status The result is that institutions suffer from short termism realigning their resources to maximize their relative rankings While rankings are widely used in policy and academic discussions this is the first book to explore the theoretical and methodological issues of ranking itself It is a welcome contribution to an often highly charged debate Far from showing how to manipulate the system this collection of work by key researchers aims to enlighten interested parties
