There are a multitude of chemical reactions happening around us. Some reactions can be seen in nature, and some can be done in the laboratory. Despite the countless number of chemical reactions we have, the majority of them can be categorized under five general types of reactions. One such reaction is the lighting of a matchstick. In this reaction, heat and light are being generated, and subsequently, smoke is released, and the formation of a new compound from the wood can be seen. In this lesson, we will be identifying and describing the different types of chemical reactions.
