Plastics Process Analysis, Instrumentation, and Control Johannes Karl Fink,2021-03-30 This book focuses on plastics process analysis instrumentation for modern manufacturing in the plastics industry Process analysis is the starting point since plastics processing is different from processing of metals ceramics and other materials Plastics materials show unique behavior in terms of heat transfer fluid flow viscoelastic behavior and a dependence of the previous time temperature and shear history which determines how the material responds during processing and its end use Many of the manufacturing processes are continuous or cyclical in nature The systems are flow systems in which the process variables such as time temperature position melt and hydraulic pressure must be controlled to achieve a satisfactory product which is typically specified by critical dimensions and physical properties which vary with the processing conditions Instrumentation has to be selected so that it survives the harsh manufacturing environment of high pressures temperatures and shear rates and yet it has to have a fast response to measure the process dynamics At many times the measurements have to be in a non contact mode so as not to disturb the melt or the finished product Plastics resins are reactive systems The resins will degrade if the process conditions are not controlled Analysis of the process allows one to strategize how to minimize degradation and optimize end use properties APAE ,1959 *SM-1 (APPR-1) Research and Development Program, Task XI* R. E. May,1959 Design and Implementation of Sensory Solutions for Industrial Environment Juraj Ďudák,Gabriel Gašpar,2023-06-27 This book presents applicable guidance into sensor system hardware and software design extensions and integration aimed at utilization of 1 wire networks The content is structured from the design of the sensor system architecture hardware and software through the implementation and optimization of the solution to the practical verification The hardware part consists of the design of specific solutions for sensor data collection and the design and integration of standard and special sensors into these solutions The development of the hardware solutions is focused on integration with 32 bit microcontrollers with ARM Cortex M0 to Cortex M4 cores For the sensor solutions the focus is on design versatility and miniaturization of dimensions with respect to the availability of the technology in the physical design The focus is on minimizing power consumption to the design of power independent modules The presented solution includes the design and implementation of the software layer which includes control software for direct communication with the sensor modules as well as an information system for continuous data storage and remote access The book presents an extensive case study that describes the design and development of a 1 wire bus controller hardware module solution with proprietary modifications that achieve improvements to the maximum 1 wire bus length The study also includes the design and implementation of a universal and power independent 1 wire bus device Using this module almost any sensor can be connected to the 1 wire bus
