| Hormone          | Where Produced or Found in Plant                                    | Major Functions                                                                                                                                                                                                                                                       |
|------------------|---------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Auxin (IAA)      | Embryo of seed, meristems of apical buds, young leaves              | Stimulates stem elongation (low concentration only), root growth, cell differentiation, and branching; regulates development of fruit; enhances apical dominance; functions in phototropism and gravitropism; promotes xylem differentiation; retards leaf abscission |
| Cytokinins       | Synthesized in roots and transported to other organs                | Affect root growth and differentiation; stimulate cell division and growth; stimulate germination; delay senescence                                                                                                                                                   |
| Gibberellins     | Meristems of apical buds and roots, young leaves, embryo            | Promote seed and bud germination, stem elongation, and leaf growth; stimulate flowering and development of fruit; affect root growth and differentiation                                                                                                              |
| Brassinosteroids | Seeds, fruit, shoots, leaves, and floral buds                       | Inhibit root growth; retard leaf abscission; promote xylem differentiation                                                                                                                                                                                            |
| Absciscic acid   | Leaves, stems, roots, green fruit                                   | Inhibits growth; closes stomata during water stress; promotes seed dormancy                                                                                                                                                                                           |
| Ethylene         | Tissues of ripening fruit, nodes of stems, aging leaves and flowers | Promotes fruit ripening, opposes some auxin effects; promotes or inhibits growth and development of roots, leaves, and flowers, depending on species                                                                                                                  |
