

NEURONS are nerve cells that provide communication throughout the body.

Read the statements below and label the neuron using clues from the statements

- The **cell body** is in charge of the neuron. It fuels the neuron's activities and contains the nucleus, but not the axons or dendrites.
 - **Nucleus** is located in the cell body and contains genetic material in the form of chromosomes.
 - **Axon** carries the messages away from the cell body.
 - **Myelin Sheath** covers the axon to protect it and help messages travel faster and easier.
 - **Dendrites** receive messages from other neurons and conducts them to the cell body.
 - The **synapse** is the junction between the axon terminals of one neuron and the dendrites of another neuron.
- jhj- **Axon Terminals** fibers at the end of the axon that transmits neurotransmitters to the dendrites of another neuron.

NEURON Review

Nerve cells, called ⁽⁷⁾ neurons, run through our entire bodies and communicate with to each other.

A. Components of a Neuron

- ⁽⁸⁾ dendrites receives information from other neurons and pass the message through the cell body.
- ⁽⁹⁾ axon carries messages away.
- What purpose does the cell body play? ⁽¹⁰⁾ produces energy that fuels the neuron's activity
- What purpose does the fatty myelin play? ⁽¹¹⁾ insulates and protects the axon

B. Communication Process

In order for a message to be sent from one neuron to another neuron, it must cross the synapse. This is a junction between the axon terminals of one neuron and the dendrites of another neuron. (It's a small gap, less than a millionth of an inch wide.
