Continuum Mechanics Via Problems and Exercises: Answers and solutions Margarita E. Eglit, Dewey H. Hodges, 1996 These volumes are intended to help graduate level students of continuum mechanics become more proficient in its applications through the solution of analytical problems Areas covered include fluid mechanics thermodynamics elastic and inelastic solids electricity and dimensional analysis Part 2 consists of about 1000 solved problems

The William Lowell Putnam Mathematical Competition

1985-2000: Problems, Solutions, and Commentary Kiran S. Kedlaya, Bjorn Poonen, Ravi Vakil, 2020-01-16 This third volume of problems from the William Lowell Putnam Competition is unlike the previous two in that it places the problems in the context of important mathematical themes. The authors highlight connections to other problems to the curriculum and to more advanced topics. The best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates. The solutions have been compiled from the American Mathematical Monthly, Mathematics Magazine, and past competitors. Multiple solutions enhance the understanding of the audience, explaining techniques that have relevance to more than the problem at hand. In addition, the book contains suggestions for further reading, a hint to each problem separate from the full solution, and background information about the competition. The book will appeal to students, teachers, professors, and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics.
