

Number Given	n = Value	1	2	3	4				
		2	5	10	17				
Find the rule or equation to find the nth term of the sequence									
How to find the equation or rules or pattern of a sequence?									
Step 1 Ask yourself the following question as your analysis .									
Number of sequence represented by letter symbol , n what rule should I make to get the given value = 2									
Applying lesson learned on how to translate word expression to algebraic symbols									
Let n = number of sequence									
x = any value									
Writing the Algebraic symbol									
n + x = 2 Now use the given value of n = 1 from the above table. Why n= 1									
n= 1 because sequence usually start at 1									
Applying lesson learned on substitution of the given value to solve the equation									
n + x = 2 By substituting the given value of n = 1. You can now solve for the value, x									
1 + x = 2									
x = 2 - 1 Mathematics short cut rule, when you move the number to the other side of equal sign, you must change it's sign from + to -. For example 1 when you move to the other side of equal sign becomes -1.									
x = 1									
This time you go back to your original algebraic symbol :									
n + x = 2 Then you substitute the value of x = 1 Why? Because you want to									
n + 1 = 2 discover the rule or formula to calculate the nth number from the series.									
a _n = n + 1 This is not yet the correct rule or formula ? Why ? Because this rule must be true for all the sequences .									

Now evaluate for n = 2 and check if the value is 5

n + 1 = 5 substitute the value of n = 2

2 + 1 ≠ 5 Is not true. Because the rule you discovered is not true, you need to do some adjustment

This time you need to adjust your discovered rule or formula : n + 1 = 2

You want this rule to be true at given value = 5 at n = 2

n + 1 = 5 at n = 2 What would be the rule to adjust your original rule to make
n = 5 - 1 the expression n + 1 = 5 at n = 2
n = 4 if you make the rule n² = 4 Then n = 2

Now modify your rule initial rule : a_n = n + 1

New rule a_n = n² + 1

This time test the validity of the new rule

a_n = 5 = n² + 1 at n = 2 Substitute the value of n = 2 to the equation.

$$5 = 2^2 + 1$$

5 = 4 + 1 The rule is valid or true.

Test for the n = 3 and a_n = 10

a_n = 10 = n² + 1 at n = 3

$$10 = 3^2 + 1$$

10 = 9 + 1 The rule is valid or true. a_n = n² + 1 ANSWER : C

Now you know how to discover the rule in any given sequence.

If you are taking AIMS test, the fastest method to figure out the rule is use the given choices of answer

For example: A) a _n = n + 1	Substitute	n = 1 and solve for	a _n = 2	Yes, Valid
			n = 2 a _n = 5	No, Not Valid
Now try option B) a _n = 2 n ²	Substitute	n = 1 and solve for	a _n = 2	Yes, Valid
			n = 2 a _n = 5	No, Not Valid

Now try option C) a_n = n² + 1 Substitute n = 1 and solve for a_n = 2 Yes, Valid

ANSWER : C n = 2 a_n = 5 Yes, Valid

n = 3 a_n = 10 Yes, Valid

n = 4 a_n = 17 Yes, Valid

Objectives, Methods, and Evaluation for Secondary Teaching Michael A. Lorber, 1996 The fourth edition of Objectives Methods and Evaluation for Secondary Teaching does more than provide a useful guide for planning teaching and evaluating Unlike most other methods texts this book focuses on helping teachers decide what they want their students to learn how their students can use the information and skills and how they as teachers can determine if the instructional objectives have been achieved Most of these questions have philosophical roots so the text begins by building a foundation consisting of philosophic viewpoints historical landmarks in education and learning theories These foundation points are then continually referred to in order to help students link theory with practice This text also incorporates a number of features not found in other texts Among these are discussions of current goals discussed by the national councils in various subject areas the factors inhibiting greater use of computers in schools the implication of developments such as E mail and the Internet and multiculturalism This text will help students better understand the problems and possible solutions sound instructional plan and implement that plan by involving students in activities concerning relevant content It is an invaluable reference guide for both students and educators and a tool that will enable students to engage in more meaningful discussions both in and outside the classroom
