Communications (PH 13.5): Comms are monitored by ECAM for "stuck mike". All RMP's will tune any radio. ACP's may be switched in case of failure using Audio Switching panel on overhead.

AUTO FLIGHT SYSTEM

First, a little general autoflight theory! The Airbus has three "layers" or levels control if you wish to call it that. The first or lowest level is manual control. This would be the pilot controlling through the sidestick and the thrust levers.

"Manual"	
Pilot	
Flight Controls	Thrust

In this case the pilot is controlling any flight control movement by use of the sidestick, which sends its signals through the appropriate computers to the hydraulic actuators and finally the flight control itself. The pilot can command any flight control movement that stays within Flight Control Normal Law. The same holds true for thrust. The pilot can manually control the thrust levers to command any thrust level that stays within the normal engine operating parameters. This is hand flying as you have always done. Do not confuse the flight control computers (i.e. ELAC, SEC and FAC) with the flight management guidance computers (FMGC).

The next level of control is autoflight. This is when the autopilot and autothrust are engaged. In this case the pilot is controlling the aircraft through the settings on the FCU for the autopilot and the thrust levers. The pilot is telling the autopilot and autothrust directly what is wanted. For example, if a heading of 90 is required the pilot just sets a heading of 90 in the FCU and the autopilot holds that heading. If the pilot wants a climb of 1000 fpm then the pilot sets 1000 fpm in the FCU.

"Autoflight"	
Pilot	
Autopilot	Autothrust
Flight Controls	Thrust

This level is basically the same as any other aircraft you have flown with autopilot and autothrust. The autopilot and autothrust are controlling through the same flight control system that the pilot uses when hand flying.

The final and most sophisticated level is computer guided. In this case the pilot enters the desired settings in the FMGC and the computer calculates the proper flight path and
