Aircraft Carrier Training Readiness Manual:

Aviation Training and Readiness Manual United States. Marine Corps,1980 *A Methodology for Estimating the Effect of Aircraft Carrier Operational Cycles on the Maintenance Industrial Base* Roland J. Yardley,2007 Over the next two decades the United States Navy will at any one time have a fleet of ten to 12 aircraft carriers Of these two or three will be continuously deployed and on station at any one time in its major overseas operational areas of the Mediterranean the Indian Ocean and Persian Gulf region and the Western Pacific in support of combatant commanders In addition the Navy intends to surge carriers including those already deployed so that a total of six carriers can be provided to combatant commanders within 30 days and another carrier within 90 days The ability of the Navy to meet all these requirements is constrained both by the six month limit on deployment length and by the intensive training and maintenance demands of aircraft carriers The Navy has considered the six month limit on deployments and the predictability of Carrier Strike Groups CSGs rotation key to maintaining forward presence while meeting personnel recruiting and retention goals In addition maintenance is constantly being performed on aircraft carriers with nearly a third of a carrier s lifetime being spent either preparing for or actually in depot level repair availabilities in which it is not deployable **Navy Aircraft Carriers** United States. General Accounting Office,1998 **Navy aircraft carriers costeffectiveness of conventionally and nuclearpowered carriers : report to congressional requesters ,** Increasing Aircraft Carrier Forward Presence Roland J. Yardley,2008 The authors assess several one and two deployment cycles assuming a deployment length of six months and a time between deployments length equal to twice the duration of the previous deployment Among many findings RAND concludes that shorter cycles can increase the forward presence of the carrier fleet and help level shipyard workloads Longer two deployment cycles can increase forward presence but may result in shipyard workload complications and deferred work backlogs BOOK JACKET
