powerful AI concepts such as description logics or rule based systems and most software engineers are largely unfamiliar with these. Gaevic and his co authors try to fill this gap by detailing how to use model driven engineering for ontology development on the Semantic Web. Part I of their book describes existing technologies, tools and standards like XML, RDF, OWL, MDA and UML. Part II presents the first detailed description of OMG's new ODM (Ontology Definition Metamodel) initiative, a specification which is expected to be in the form of an OMG language like UML. Finally, Part III is dedicated to applications and practical aspects of developing ontologies using MDA based languages. For this second edition, the descriptions of the related standards like MOF, ODM, OCL and OWL have been revised and updated. New chapters introducing the basic principles of model driven engineering, recent research results on metamodeling Semantic Web rule languages, an introduction to the Atlas Transformation Language (ATL) and its tool support, and last but not least many new examples have been added.
