

The Digestive System

What is the digestive system?

The digestive system, or **gastrointestinal tract**, is a tract of organs that is responsible for digesting and absorbing nutrients from food. Food enters through the mouth, is broken down in the stomach, and then moves through the small intestine, where nutrients are absorbed. The digestive system also includes accessory organs that help in the process, such as the liver, pancreas, and gallbladder.

Liver, pancreas & gallbladder

After leaving the stomach, chyme moves into the duodenum, the first part of the small intestine, where it is mixed with bile secreted by the **liver** and pancreatic juice secreted by the **pancreas**. This area is a mixing region on the intestine where the digestive system continues. The **gallbladder** stores bile secreted by the **liver** and releases it into the **duodenum**.

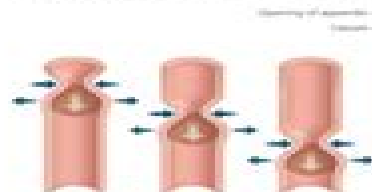

Layers of large intestine

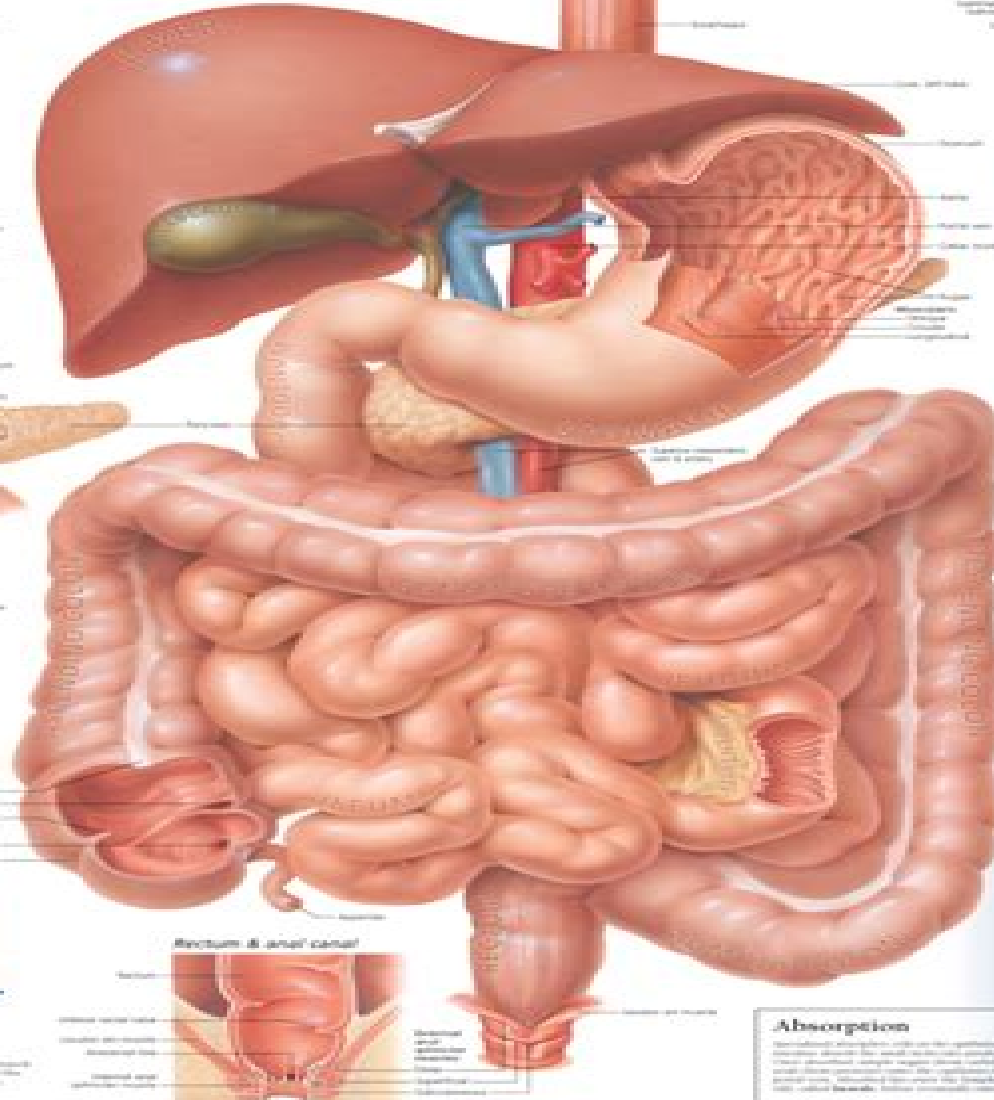

Large intestine

The large intestine consists of the cecum, the appendix, ascending colon, transverse colon, descending colon, sigmoid colon, and rectum. The large intestine is responsible for absorbing water and electrolytes from the undigested food and forming feces.

Peristaltic action

Food material is pushed through the digestive system by a series of powerful muscular contractions called peristalsis. These contractions move the material forward and the wave action, which the waves then follow.

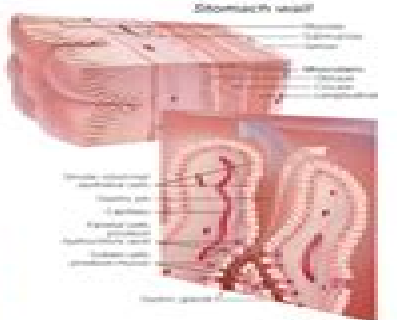

The mouth & salivary glands

Chewing the food breaks it into smaller pieces, making it easier to swallow. Saliva, secreted by the salivary glands, moistens the food and helps in the digestion of carbohydrates. Saliva also contains enzymes that help in the digestion of proteins and fats.

The stomach

The stomach is a large, muscular organ that is responsible for mixing food with gastric juice and breaking it down into smaller pieces. The stomach wall is composed of several layers, including the mucosa, submucosa, muscularis, and serosa.

Small intestine

The small intestine is a long, coiled tube that is responsible for the majority of the digestion and absorption of nutrients. It is divided into three parts: the duodenum, jejunum, and ileum.

Absorption

The small intestine is responsible for the absorption of the majority of the nutrients from the food. The nutrients are absorbed into the bloodstream and then transported to the rest of the body.
