

THE SKELETON
The skeleton is the framework of the body, supporting the soft organs and tissues. It is composed of bones and cartilage. The bones are made of a hard, white, mineralized substance called bone tissue. The cartilage is a soft, flexible tissue that connects the bones. The skeleton is divided into the axial skeleton (skull, spine, and rib cage) and the appendicular skeleton (arms and legs).

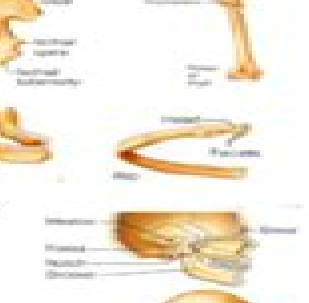

THE MUSCLES
The muscles are the soft tissue that contracts to move the bones. They are made of muscle fibers. The muscles are attached to the bones by tendons. The muscles are divided into the skeletal muscles (voluntary) and the smooth muscles (involuntary).

THE JOINTS
The joints are the points where two or more bones meet. They allow the bones to move relative to each other. There are three main types of joints: ball-and-socket joints, hinge joints, and sliding joints.

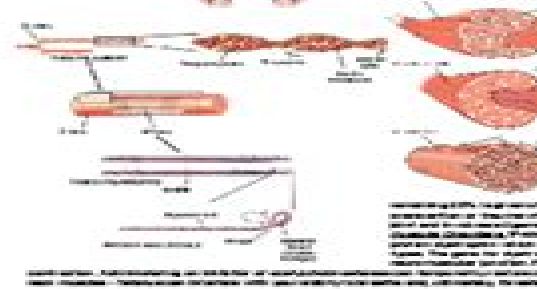

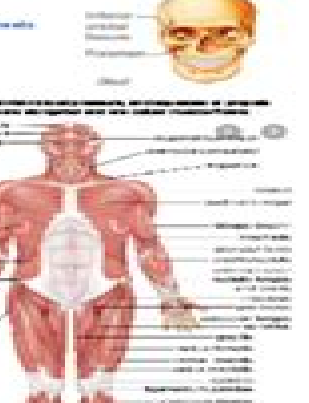

THE BONES
The bones are the hard, white, mineralized structures that support the body. They are made of bone tissue. The bones are divided into the long bones (femur, tibia, fibula, humerus, radius, ulna, etc.) and the short bones (carpals, metacarpals, etc.).
