McKinley,Valerie Dean O'Loughlin,Theresa Stouter Bidle,2021 Human anatomy and physiology is a fascinating subject However students can be overwhelmed by the

complexity the interrelatedness of concepts from different chapters and the massive amount of material in the course Our goal was to create a textbook to guide students on a clearly written and expertly illustrated beginner s path through the human body An Integrative Approach One of the most daunting challenges that students face in mastering concepts in an anatomy and physiology course is integrating related content from numerous chapters Understanding a topic like blood pressure for example requires knowledge from the chapters on the heart blood vessels kidneys and how these structures are regulated by the nervous and endocrine systems The usefulness of a human anatomy and physiology text is dependent in part on how successfully it helps students integrate these related concepts Without this students are only acquiring what seems like unrelated facts without seeing how they fit into the whole To adequately explain such complex concepts to beginning students in our own classrooms we as teachers present multiple topics over the course of many class periods all the while balancing these detailed explanations with refreshers of content previously covered and intermittent glimpses of the big picture Doing so ensures that students learn not only the individual pieces but also how the pieces ultimately fit together This book represents our best effort to replicate this teaching process In fact it is the effective integration of concepts throughout the text that makes this book truly unique from other undergraduate anatomy and physiology texts

semester course and continues to carefully select a range of material that proves just right for the shorter course New information on hot topics like the HPV Vaccine Infantile Polycystic Kidney disease and Sudden Infant Death Syndrome SIDS draws students into the material while a flexible topic structure allows instructors to choose a chapter sequence to meet virtually any need
