Unit 7 – Circulatory System - The Heart

Approximately the size of a person's fist, the hollow, cone-shaped heart weighs less than a pound. The pointed **apex** is pointed toward the left hip and rests on the diaphragm, approximately at the level of the fifth intercostal space. Its broader posterosuperior aspect, the **base**, from which the great vessels of the body emerge, points toward the right shoulder and lies beneath the second rib.

The human heart essentially is two separate hearts enclosed in a membrane

called the **pericardium**. The pericardium surrounds the heart and secretes a fluid that reduces friction as the heart beats. Fibrous tissues in the pericardium protect the heart and anchor it to surrounding structures, such as the diaphragm and sternum.

The heart walls are composed of three layers:

- The **epicardium**, or *visceral pericardium*, is actually part of the pericardium.
- The **myocardium** consists of thick bundles of cardiac muscle, the layer that actually contracts.
- The **endocardium** is a thin, glistening sheet of endothelium that lines the heart chambers and helps blood flow smoothly through the heart. It is continuous with the linings of the blood vessels leaving and entering the heart.

The upper chambers of the heart, **right and left atria (atrium)**, receive blood returning to the heart. As a rule, they are not important in the pumping activity of the heart. Blood flows into the atria under low pressure from the veins and then continues on to fill the ventricles.

balloon angioplasty *Prescriptions for Virtuosity* Eric I. Karchmer, 2022-09-20 Although Chinese medicine is assumed to be a timeless healing tradition the encounter with modern biomedicine threatened its very existence and led to many radical changes *Prescriptions for Virtuosity* tells the story of how doctors of Chinese medicine have responded to the global dominance of biomedicine and developed new forms of virtuosity to keep their clinical practice relevant in contemporary Chinese society Based on extensive ethnographic and historical research the book documents the strategies of Chinese medicine doctors to navigate postcolonial power inequalities Doctors have followed two seemingly contradictory courses of action First they have emphasized the unique Chinese characteristics of their practice defining them against the perceived strengths of biomedicine and producing an ontological divide between the two medical systems These oppositions have inadvertently marginalized Chinese medicine making it seem appropriate for clinical use only when biomedical solutions are lacking Second doctors have found points of convergence to facilitate the blending of the two medical practices producing innovative solutions to difficult clinical problems *Prescriptions for Virtuosity* examines how the postcolonial condition can generate not only domination but hybridity Karchmer shows for example how the clinical methodology of pattern discrimination and treatment determination *bianzheng lunzhi* which is today celebrated as the quintessential characteristic of Chinese medicine is a twentieth century invention When subjected to the institutional standardizations of hospital practice *bianzheng lunzhi* can lead to an impoverished form of medicine But in the hands of a virtuoso physicians it becomes a dynamic tool for moving between biomedicine and Chinese medicine to create innovative new therapies *Cranial Intelligence* Ged Sumner, Steve Haines, 2011-01-15 This new and important textbook demystifies the biodynamic approach to craniosacral therapy and shows how and why it can be so effective at bringing about a natural realignment towards optimal health The authors describe how to respond appropriately to each client's system and how to support deep felt and lasting change in patients
