2014 November Social Sciences Geography Memorandum:

The Politics of Immigration Tom K. Wong, 2017 Immigration has been deeply woven into the fabric of American nation building since the founding of the Republic. Indeed, immigrants have played an integral role in American history, but they are also intricately tied to America's present and will feature prominently in America's future. Immigration can shape a nation. Consequently, immigration policy can maintain, replenish, and even reshape it. Immigration policy debates are thus seldom just about who to let in and how many, as a nation's immigration policies can define its identity. This is what helps breathe fire into the politics of immigration. Against this backdrop, political parties promote their own narratives about what the immigration policies of a nation of immigrants should be while undermining the contrasting narratives of political opponents. Racial and ethnic groups mobilize for political inclusion as immigration increases their numbers but are often confronted by the counteractive mobilization of nativist groups. Legislators calibrate their positions on immigration by weighing traditional electoral concerns against a new demographic normal that is reshaping the American electorate. At stake are not just what our immigration policies will be but also what America can become. What are the determinants of immigration policymaking in the United States? The Politics of Immigration focuses the analytical lens on the electoral incentives that legislators in Congress have to support or oppose immigration policy reforms at the federal level. In contrast to previous arguments, Tom K. Wong argues that contemporary immigration politics in the United States can be characterized by three underlying features: the entrenchment of partisan divides among legislators on the issue of immigration, the political implications of the demographic changes that are reshaping the American electorate, and how these changes are creating new opportunities to define what it means to be an American in a period of unprecedented national origins, racial, and ethnic and cultural diversity.

A Review of the Landscape Conservation Cooperatives National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Agriculture and Natural Resources, Board on Atmospheric Sciences and Climate, Committee on the Evaluation of the Landscape Conservation Cooperatives, 2016-11-28 The United States tradition of conserving fish wildlife habitats and cultural resources dates to the mid 19th century States have long sought to manage fish and wildlife species within their borders whereas many early federal conservation efforts focused on setting aside specific places as parks sanctuaries or reserves With advances in landscape ecology over the past quarter century conservation planners scientists and practitioners began to stress the importance of conservation efforts at the scale of landscapes and seascapes These larger areas were thought to harbor relatively large numbers of species that are likely to maintain population viability and sustain ecological processes and natural disturbance regimes often considered critical factors in conserving biodiversity By focusing conservation efforts at the level of whole ecosystems and landscape practitioners can better attempt to conserve the vast majority of species in a particular ecosystem Successfully addressing

the large scale interlinked problems associated with landscape degradation will necessitate a planning process that bridges different scientific disciplines and across sectors as well as an understanding of complexity uncertainty and the local context of conservation work The landscape approach aims to develop shared conservation priorities across jurisdictions and across many resources to create a single collaborative conservation effort that can meet stakeholder needs Conservation of habitats species ecosystem services and cultural resources in the face of multiple stressors requires governance structures that can bridge the geographic and jurisdictional boundaries of the complex socio ecological systems in which landscape level conservation occurs The Landscape Conservation Cooperatives LCC Network was established to complement and add value to the many ongoing state tribal federal and nongovernmental efforts to address the challenge of conserving species habitats ecosystem services and cultural resources in the face of large scale and long term threats including climate change A Review of the Landscape Conservation Cooperatives evaluates the purpose goals and scientific merits of the LCC program within the context of similar programs and whether the program has resulted in measurable improvements in the health of fish wildlife and their habitats

Healthy, Resilient, and Sustainable Communities After Disasters Institute of Medicine, Board on Health Sciences Policy, Committee on Post-Disaster Recovery of a Community's Public Health, Medical, and Social Services, 2015-09-10 In the devastation that follows a major disaster there is a need for multiple sectors to unite and devote new resources to support the rebuilding of infrastructure the provision of health and social services the restoration of care delivery systems and other critical recovery needs In some cases billions of dollars from public private and charitable sources are invested to help communities recover National rhetoric often characterizes these efforts as a return to normal But for many American communities pre disaster conditions are far from optimal Large segments of the U S population suffer from preventable health problems experience inequitable access to services and rely on overburdened health systems A return to pre event conditions in such cases may be short sighted given the high costs both economic and social of poor health Instead it is important to understand that the disaster recovery process offers a series of unique and valuable opportunities to improve on the status quo Capitalizing on these opportunities can advance the long term health resilience and sustainability of communities thereby better preparing them for future challenges

Healthy Resilient and Sustainable Communities After Disasters identifies and recommends recovery practices and novel programs most likely to impact overall community public health and contribute to resiliency for future incidents This book makes the case that disaster recovery should be guided by a healthy community vision where health considerations are integrated into all aspects of recovery planning before and after a disaster and funding streams are leveraged in a coordinated manner and applied to health improvement priorities in order to meet human recovery needs and create healthy built and natural environments The conceptual framework presented in **Healthy Resilient and Sustainable Communities After Disasters** lays the groundwork to achieve this goal and provides operational guidance for multiple sectors involved in community planning and disaster recovery **Healthy Resilient and**

Sustainable Communities After Disasters calls for actions at multiple levels to facilitate recovery strategies that optimize community health. With a shared healthy community vision, strategic planning that prioritizes health and coordinated implementation, disaster recovery can result in communities that are healthier, more livable places for current and future generations to grow and thrive, communities that are better prepared for future adversities.

Climate Security Matti Goldberg, 2023-12-01

This book presents an empirical study of the role of knowledge in the making of the climate security nexus. Climate change might give the Soviet Union a competitive advantage in the Cold War. Extreme droughts contributed to wars in Darfur, Syria, or Yemen. Melting sea ice creates geopolitical risks. Russia's climate-destroying hydrocarbons enabled its invasion of Ukraine. These are just some of the many ways in which climate change and conflicts have been linked into a climate security nexus. In this innovative book, Matti Goldberg considers how such connections are constructed and asks to what extent they are driven by evidence and science. Goldberg describes the tools used to present the wars of Darfur and Syria as climate wars and considers the fragmented role of the sciences in those presentations, as well as the resulting patterns of influence and marginalization of impacted populations. The author also highlights how the international community can better integrate the situations of people at the frontlines of climate change into policymaking and, based on an analysis of the dynamic nature of power, identifies potential entry points for positive change. This book is a must read for researchers interested in climate security links, in science-policy interfaces, and in the formation of nexuses of issues in international politics. It is also of interest to practitioners working on the climate security nexus and science-policy interfaces.
