1) Cover for the thermal expansion
2) Condenser for the thermal expansion
3) Insulation that connects the condenser to the cover

NOTICE

Care must be taken to ensure that fluids are contained during performance of inspection, maintenance, testing, adjusting and repair of the product. Be prepared to collect the fluid with suitable containers before opening any compartment or disassembling any component containing fluids.

Refer to Special Publication, NHTSA/108, "Car Dealer Service Test (CST)" or refer to Special Publication, NHTSA/108, "Car Shop Supplies and Tools Catalog" for tools and supplies suitable to collect and contain fluids on Cat products.

Dispose of all fluids according to local regulations and mandates.

1. Undoing the latches and pull down on the condenser to remove the condenser.

Note: Removing condenser may be difficult while the engine is operating. The condenser has negative air pressure while the engine is operating which creates a vacuum.

2. Remove the used filter. Engine oil may be contained in the filter and in the condenser. Properly contain all fluids.
3. Remove the O-ring seal on the top and cap of the used element. Install a new O-ring seal onto the top of the new filter.
4. Remove the O-ring seal from the bottom of the filter. Inspect the used seal for wear and damage. Install an undamaged O-ring seal onto the bottom of the new filter.
5. Dispose of the used filter.

6. Install a new filter. Properly align the condenser with the cover and clamp the latches.

Note: Caterpillar will not be held liable for an engine that does not comply with emissions standards due to modification of the filter element filter or due to the use of a filter that is not approved by Caterpillar.

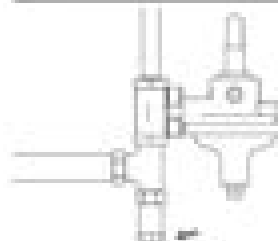

Gas Pressure Regulator Condensation - Drain

SMCS Code: 1275/043

To collect condensation, drip legs should be installed in the following locations:

Maintenance Recommendations Generator - Dry

- Supply line for the gas pressure regulator
- Exhaust line for the gas pressure regulator
- Supply line to the gas shutoff valve

6836J0206 Cap on the drip leg for the gas supply line to the gas pressure regulator

Cap on the drip leg for the gas supply line to the gas pressure regulator

1. Close the main gas supply valve.
2. Remove the caps from the drip legs.
3. Allow the moisture to drain into a suitable container. Inspect the drip legs for debris. Clean the drip legs, if necessary.
4. Clean the caps. Install the caps.
5. Open the main gas supply valve.

Generator - Dry

SMCS Code: 4450/500

NOTICE

Do not operate the generator if the windings are wet. If the generator is operated when the windings are wet, damage can occur due to insulation breakdown.

Personal injury or death can result from improper troubleshooting and repair procedures.

The following troubleshooting and repair procedures should only be performed by qualified personnel familiar with this equipment.

Refer to Safety Section, "Generator Isolating for Maintenance" for information regarding the procedure to safely isolate the generator.

When moisture is present or when moisture is suspected in a generator, the generator must be dried before being energized.

If the drying procedure does not reduce the insulation resistance to an acceptable value, the winding should be reconditioned.

Drying Methods

The following methods can be used for drying a generator:

- Self-circulating air method
- Oven method
- Controlled current method
- Energize the optional space heaters

NOTICE

Do not allow the winding temperature to exceed 65 °C (149 °F). Temperatures that are greater than 65 °C (149 °F) will damage the winding insulation.

Self-Circulating Air Method

Run the engine and disconnect the generator load. This will help circulate air. Operate the generator space heaters.

Oven Method

Place the entire generator inside a forced air drying oven for four hours at 65 °C (149 °F).

NOTICE

Use a forced air type oven rather than a radiant type oven.

Radiant type ovens can cause localized overheating.

A methodology for planning sustainable supply chain initiatives Kucht Campos, Juliana, 2016-11-18 This publication presents a methodology for planning sustainable supply chain initiatives consisting of three scopes each with its appropriate mechanism and background theory The first one Acting In structures organizational practices in a Framework for Managing Sustainable Supply Chain Practices The second scope Acting Out compares practices from 32 recognized sustainability leaders from five different industries through a Benchmarks Practices Bank The third scope Acting Beyond supports defining and managing a portfolio of sustainable supply chain practices

through a Practices Portfolio Planning Matrix which provides a list of opportunities for the exchange of knowledge between Germany and Brazil. The methodology significantly supports supply chain decision makers in planning initiatives and visualizing collaboration opportunities within a firm industry and shared value chain perspective. As companies become more global, challenges also become greater; thus, a more systematic and holistic approach can lead the way for developing more innovative solutions. In the following doctoral work, a methodology for planning sustainability initiatives in the supply chain is developed, which consists of three main fields of action and for which the theoretical background as well as suitable mechanisms are shown. The first area is the so-called Acting In, which structures organisational tasks and integrates these into a framework, the Framework for Managing Sustainable Supply Chain Practices. The second area, Acting Out, compares various procedures of 32 recognised companies in the field of sustainability with the help of the database Benchmarks Practices Bank. Acting Beyond, the third area, helps to define a portfolio of sustainable measures in the supply chain. Here, the Practices Portfolio Planning Matrix is used, which simultaneously shows interesting possibilities for knowledge exchange between Germany and Brazil. The developed methodology is both for research as well as for the user in the supply chain area of great importance. The mechanisms developed here support decision makers in companies in the planning of sustainability initiatives in the supply chain and clarify cooperation possibilities on different levels, internally, at the same value chain stage and across the entire value chain. As companies become increasingly global, the challenges are growing. Therefore, a more systematic and holistic approach is necessary. One possible approach is the use of the Practices Portfolio Planning Matrix. The methodology is both for research as well as for the user in the supply chain area of great importance. The mechanisms developed here support decision makers in companies in the planning of sustainability initiatives in the supply chain and clarify cooperation possibilities on different levels, internally, at the same value chain stage and across the entire value chain.

Da die Unternehmen immer globaler agieren werden die Herausforderungen größer. Daher kann eine systematischere ganzheitlichere Herangehensweise ein Ansatz sein, wenn es um die Entwicklung von innovativen Lösungen geht. **Moody's International Manual**, 1995.
