International Handbook of Mathematical Learning Difficulties Annemarie Fritz,Vitor Geraldi Haase,Pekka Räsänen,2019-01-30 This comprehensive volume provides teachers researchers and education professionals with cutting edge knowledge developed in the last decades by the educational behavioural and neurosciences integrating cognitive developmental and socioeconomic approaches to deal with the problems children face in learning mathematics The neurocognitive mechanisms and the cognitive processes underlying acquisition of arithmetic abilities and their significance for education have been the subject of intense research in the last few decades but the most part of this research has been conducted in non applied settings and there s still a deep discrepancy between the level of scientific knowledge and its implementation into actual educational settings Now it s time to bring the results from the laboratory to the classroom Apart from bringing the theoretical discussions to educational settings the volume presents a wide range of methods for early detection of children with risks in mathematics learning and strategies to develop effective interventions based on innovative cognitive test instruments It also provides insights to translate research knowledge into public policies in order to address socioeconomic issues And it does so from an international perspective dedicating a whole section to the cultural diversity of mathematics learning difficulties in different parts of the world All of this makes the International Handbook of Mathematical Learning Difficulties an essential tool for those involved in the daily struggle to prepare the future generations to succeed in the global knowledge society

Halvorsen: Sharing Knowledge, Transforming Societi,2023-01-10 In June 2016 the Norwegian Programme for Capacity Development in Higher Education and Research for Development Norhed hosted a conference on the theme of knowledge for development in an attempt to shift the focus of the programme towards its academic content This book follows up on that event The conference highlighted the usefulness of presenting the value of Norhed s different projects to the world showing how they improve knowledge and expand access to it through co operation A wish for more meta knowledge was also expressed and this gives rise to the following questions Is this way of co operating contributing to the growth of independent post colonial knowledge production in the South based on analyses of local data and experiences in ways that are relevant to our shared future Does the growth of academic

independence as well as greater equality and the ability to develop theories different to those imposed by the better off parts of the world give rise to deeper understandings and better explanations Does it at least spread the ability to translate existing methodologies in ways that add meaning to observations of local context and data and thus enhance the relevance and influence of the academic profession locally and internationally This book in its varied contributions does not provide definite answers to these questions but it does show that Norhed is a step in the right direction Norhed is an attempt to fund collaboration within and between higher education institutions We know that both the uniqueness of this programme and ideas of how to better utilise the learning and experience emerging from it call for more elaboration and broader dissemination before we can offer further guidance on how to do things better This book is a first attempt **Farm**
