From the Basic Homotopy Lemma to the Classification of C^* -algebras Huaxin Lin, 2017-08-11 This book examines some recent developments in the theory of algebras which are algebras of operators on Hilbert spaces An elementary introduction to the technical part of the theory is given via a basic homotopy lemma concerning a pair of almost commuting unitaries The book presents an outline of the background as well as some recent results of the classification of simple amenable algebras otherwise known as the Elliott program This includes some stable uniqueness theorems and a revisiting of Bott maps via stable homotopy Furthermore theory related rotation maps are introduced The book is based on lecture notes from the CBMS lecture sequence at the University of Wyoming in the summer of 2015

Property $(\$T\$)$ for Groups Graded by Root Systems Mikhail Ershov, Andrei Jaikin-Zapirain, Martin Kassabov, 2017-09-25 The authors introduce and study the class of groups graded by root systems They prove that if Γ is an irreducible classical root system of rank n and G is a group graded by Γ then under certain natural conditions on the grading the union of the root subgroups is a Kazhdan subset of G As the main application of this theorem the authors prove that for any reduced irreducible classical root system of rank n and a finitely generated commutative ring with the Steinberg group and the elementary Chevalley group have property $(\$T\$)$ They also show that there exists a group with property $(\$T\$)$ which maps onto all finite simple groups of Lie type and rank n thereby providing a unified proof of expansion in these groups

Thailand International Monetary Fund. Asia and Pacific Dept, 2019-10-07 This 2019 Article IV Consultation discusses Thailand's robust policy framework and ample buffers continue to underpin its resilience to external headwinds The authorities have taken measures to strengthen medium term fiscal management and financial stability With respect to the outlook growth is projected to slow down to about 3 percent in 2019-20 reflecting external and domestic headwinds On the external side the projected slowdown

in global demand and uncertainty about trade tensions are expected to weigh on exports throughout 2019 Policies should aim at boosting growth while promoting domestic and external rebalancing and making growth more inclusive The IMF staff recommends a front loaded fiscal impulse in FY 2020 Thailand should use available fiscal space judiciously to spur domestic demand and support potential output Implementation of macro critical public infrastructure projects would also crowd in private investment The report also highlights that structural reforms aimed at improving the implementation of public investment strengthen social safety nets and raise productivity in an increasingly digital economy would boost growth and enhance its inclusiveness Budget of the U.S. Government, Appendix ,2013-04-10 Presents detailed information on

individual programs and appropriation accounts that constitute the budget Includes for each Government department and agency the text of proposed appropriations language budget schedules for each account new legislative proposals and explanations of the work to be performed and the funds needed and proposed general provisions applicable to the appropriations of entire agencies or groups of agencies The Quasispecies Equation and Classical Population Models

Raphaël Cerf,Joseba Dalmau,2022-07-30 This monograph studies a series of mathematical models of the evolution of a population under mutation and selection Its starting point is the quasispecies equation a general non linear equation which describes the mutation selection equilibrium in Manfred Eigen s famous quasispecies model A detailed analysis of this equation is given under the assumptions of finite genotype space sharp peak landscape and class dependent fitness landscapes Different probabilistic representation formulae are derived for its solution involving classical combinatorial quantities like Stirling and Euler numbers It is shown how quasispecies and error threshold phenomena emerge in finite population models and full mathematical proofs are provided in the case of the Wright Fisher model Along the way exact formulas are obtained for the quasispecies distribution in the long chain regime on the sharp peak landscape and on class dependent fitness landscapes Finally several other classical population models are analyzed with a focus on their dynamical behavior and their links to the quasispecies equation This book will be of interest to mathematicians and theoretical ecologists biologists working with finite population models Virtual Fundamental Cycles in Symplectic Topology John W.

Morgan,Dusa McDuff,Mohammad Tehrani,Kenji Fukaya,Dominic Joyce,2019-04-12 The method of using the moduli space of pseudo holomorphic curves on a symplectic manifold was introduced by Mikhail Gromov in 1985 From the appearance of Gromov s original paper until today this approach has been the most important tool in global symplectic geometry To produce numerical invariants of these manifolds using this method requires constructing a fundamental cycle associated with moduli spaces This volume brings together three approaches to constructing the virtual fundamental cycle for the moduli space of pseudo holomorphic curves All approaches are based on the idea of local Kuranishi charts for the moduli space Workers in the field will get a comprehensive understanding of the details of these constructions and the assumptions under which they can be made These techniques and results will be essential in further applications of this approach to producing

invariants of symplectic manifolds
