Matrix Multiplication Word Problems

1. Skunk Up Soup produces chicken noodle, hearty vegetable, tomato basil, and country beef soups. They produce them in three sizes: small, medium, and large.

The matrix gives one day's production of cans of soup.

$$\begin{array}{l} \text{small} \\ \text{medium} \\ \text{large} \end{array} \begin{bmatrix} \text{chicken} \\ \text{noodle} \\ \text{hearty} \\ \text{vegetable} \\ \text{tomato} \\ \text{basil} \\ \text{country} \\ \text{beef} \end{bmatrix} = A$$

The next matrix gives the number of bunches in each size can.

$$\begin{array}{l} \text{small} \\ \text{medium} \\ \text{large} \end{array} \begin{bmatrix} \text{green} \\ \text{peas} \end{bmatrix} = B$$

- Calculate the product AB .
- Interpret the entries in the product matrix AB .

Handbook of Algebra M. Hazewinkel, 2008-04-18 Algebra as we know it today consists of many different ideas concepts and results A reasonable estimate of the number of these different items would be somewhere between 50 000 and 200 000 Many of these have been named and many more could and perhaps should have a name or a convenient designation Even the nonspecialist is likely to encounter most of these either somewhere in the literature disguised as a definition or a theorem or to hear about them and feel the need for more information If this happens one should be able to find enough information in this Handbook to judge if it is worthwhile to pursue the quest In addition to the primary information given in the Handbook there are references to relevant articles books or lecture notes to help the reader An excellent index has been included which is extensive and not limited to definitions theorems etc The Handbook of Algebra will publish articles as they are received and thus the reader will find in this third volume articles from twelve different sections The advantages of this scheme are two fold accepted articles will be published quickly and the outline of the Handbook can be allowed to evolve as the various volumes are published A particularly important function of the Handbook is to provide professional mathematicians working in an area other than their own with sufficient information on the topic in question if and when it is needed Thorough and practical source of information Provides in depth coverage of new topics in algebra Includes references to relevant articles books and lecture notes *Computer Algebra* R. Albrecht, B. Buchberger, G.E. Collins, R. Loos, 2013-06-29 The journal Computing has established a series of supplement volumes the fourth of which appears this year Its purpose is to provide a coherent presentation of a new topic in a single volume The previous subjects were Computer Arithmetic 1977 Fundamentals of Numerical Computation 1980 and Parallel Processes and Related Automata 1981 the topic of this 1982 Supplementum to Computing is Computer Algebra This subject which emerged in the early nineteen sixties has also been referred to as symbolic and algebraic computation or formula manipulation Algebraic algorithms have been receiving increasing interest as a result of the recognition of the central role of algorithms in computer science They can be easily specified in a formal and rigorous way and provide solutions to problems known and studied for a long time Whereas traditional algebra is concerned with constructive methods computer algebra is furthermore interested in efficiency in implementation and in hardware and software aspects of the algorithms It develops that in deciding effectiveness and determining efficiency of algebraic methods many other tools recursion theory logic analysis and combinatorics for example are necessary In the beginning of the use of computers for symbolic algebra it soon became apparent that the straightforward textbook methods were often very inefficient Instead of turning to numerical approximation methods computer algebra studies systematically the sources of the

inefficiency and searches for alternative algebraic methods to improve or even replace the algorithms

Computer Algebra Handbook Johannes Grabmeier, Erich Kaltofen, Volker Weispfenning, 2012-12-06 Two ideas lie gleaming on the jeweler's velvet The first is the calculus the second the algorithm The calculus and the rich body of mathematical analysis to which it gave rise made modern science possible but it has been the algorithm that has made possible the modern world David Berlinski The Advent of the Algorithm First there was the concept of integers then there were symbols for integers I II III 1111 fttt what might be called a sticks and stones representation I II III IV V Roman numerals 1 2 3 4 5 Arabic numerals etc Then there were other concepts with symbols for them and algorithms sometimes for manipulating the new symbols Then came collections of mathematical knowledge tables of mathematical computations theorems of general results Soon after algorithms came devices that provided assistance for carrying out computations Then mathematical knowledge was organized and structured into several related concepts and symbols logic algebra analysis topology algebraic geometry number theory combinatorics etc This organization and abstraction lead to new algorithms and new fields like universal algebra But always our symbol systems reflected and influenced our thinking our concepts and our algorithms

Computational Problems in Abstract Algebra John Leech, 2014-05-17 Computational Problems in Abstract Algebra provides information pertinent to the application of computers to abstract algebra This book discusses combinatorial problems dealing with things like generation of permutations projective planes orthogonal latin squares graphs difference sets block designs and Hadamard matrices Comprised of 35 chapters this book begins with an overview of the methods utilized in and results obtained by programs for the investigation of groups This text then examines the method for establishing the order of a finite group defined by a set of relations satisfied by its generators Other chapters describe the modification of the Todd Coxeter coset enumeration process This book discusses as well the difficulties that arise with multiplication and inverting programs and of some ways to avoid or overcome them The final chapter deals with the computational problems related to invariant factors in linear algebra Mathematicians as well as students of algebra will find this book useful

Three Papers on Algebras and Their Representations V. N. Gerasimov, N. G. Nesterenko, A. I. Valitskas, 1993 This book contains the doctoral dissertations of three students from Novosibirsk who participated in the seminar of L A Bokut The dissertation of Gerasimov focuses on Cohn s theory of noncommutative matrix localizations Gerasimov presents a construction of matrix localization that is not directly related to prime matrix ideals of Cohn but rather deals with localizations of arbitrary subsets of matrices over a ring The work of Valitskas applies ideas and constructions of Gerasimov to embeddings of rings into radical rings in the sense of Jacobson to develop a theory essentially parallel to Cohn s theory of embeddings of rings into skew fields Nesterenko s dissertation solves some important problems of Anan in and Bergman about representations of infinite dimensional algebras and categories in triangular matrices over commutative rings
