Topic 1

Lesson 1-1

1. The sum, product, difference, or quotient of real numbers is a real number. Subsets of the real numbers are the set of rational numbers and the set of irrational numbers. The rational numbers include integers, the integers include whole numbers, and the whole numbers include natural numbers. **3.** Rational numbers are a subset of all real numbers because all rational numbers are also real. Rational numbers are not a subset of the irrational numbers because no rational numbers are irrational. **5.** Yes. All the values in D are also in R . **7.** no **9.** 0.6, $\frac{2}{3}$, $\sqrt{\frac{9}{16}}$ **11. a.** rational **b.** rational **13.** The student should have written $\sqrt{144} = 12$. So, the correct order is $\sqrt{144}$, 68, 12, $\frac{234}{3}$. **15. a.** Sometimes true; positive integers and zero are whole numbers, but negative integers are not. **b.** Always true; natural numbers are a subset of rational numbers. **c.** Never true; although integers and irrational numbers are both subsets of real numbers, they have no elements in common. **17.** rational, real **19.** whole, integers, rational, real **21.** integers, rational, real **23.** 0.16, $\frac{1}{3}$, $\sqrt{\frac{1}{4}}$ **25.** D **27.** A **29.** Rational; can be expressed as a ratio **31.** Irrational; divisor is irrational

33. Yes; the quotient of a rational number and an irrational number can be rewritten as a ratio with a rational number in the numerator and an irrational number in the denominator, so the quotient will always be irrational. **35.** rational numbers **37.** no; no; no; yes; no; yes **39. Part A** Kimberly; she has the highest free throw percentage. **Part B** Martin; 49.5% is greater than 920, or 45% and 0.448, or 44.8% **Part C** Kimberly, Corey, Martin **Part D** Kimberly; Kimberly makes about 54.8% of her shots, while Corey only makes 52.8%, and Martin only makes 50.8%.

Lesson 1-2

1. Use variables and operations to model situations with algebraic equations. Then use properties and inverse operations to isolate the variable on one side of the equation. The other side of the equation is the solution. **3.** It removes the fractions to make the equation easier to solve. **5.** 2 **7.** $\frac{37}{4}$ **9.** $\frac{50}{21}$, or about 2.38 miles; Answers may vary. Sample: The equation $\frac{d}{2} + 2.25 + \frac{d}{40} = 3.5$ models this situation. Multiplying both sides by the LCD, 40, gives $20d + 90 + d = 140$, which simplifies to $21d = 50$. **11.** -3

Resources in Education ,1994-11 El-Hi Textbooks & Serials in Print, 2005 ,2005 **Teaching Mathematics in Grades 6 - 12** Randall E. Groth, 2012-08-10 A journey into the vibrant and intriguing world of mathematics education Teaching Mathematics in Grades 6 12 explores how research in mathematics education can inform teaching practice in grades 6 12 The author shows secondary mathematics teachers the value of being a researcher in the classroom by

constantly experimenting with methods for developing students mathematical thinking and then connecting this research to practices that enhance students understanding of the material The chapters in Part I introduce secondary teachers to the field of mathematics education with cross cutting issues that apply to teaching and learning in all mathematics content areas The chapters in Part II are devoted to specific mathematics content strands and describe how students think about mathematical concepts The goal of the text is to have secondary math teachers gain a deeper understanding of the types of mathematical knowledge their students bring to grade 6 12 classrooms and how students thinking may develop in response to different teaching strategies

Querying a Web of Linked Data Ingrid Maria Spakler, 2016-04-15 In recent years an increasing number of organizations and individuals have contributed to the Semantic Web by publishing data according to the Linked Data principles In addition a significant body of Semantic Web research exists that studies various aspects of knowledge representation and automated reasoning over collections of such data However a challenge that is crucial for achieving the vision of a Semantic Web but that has not yet been studied to a comparable extent is to enable automated software agents to operate directly on decentralized Linked Data that is distributed over the WWW In particular fundamental questions related to querying this data on the WWW have received very limited research attention This book contributes towards filling this gap by studying the foundations of declarative queries over Linked Data on the WWW Our particular focus in this book are approaches to use the SPARQL query language and execute queries by traversing Linked Data live during the query execution process More specifically we first provide formal foundations to adapt SPARQL to the given context Thereafter we use an abstract machine model to formally show computational feasibility and related properties of the resulting types of SPARQL queries Additionally we investigate

fundamental properties of applying the traversal based approach to query execution that is tailored to the use case of querying Linked Data directly on the WWW The author Olaf Hartig has won the Semantic Web Science Association SWSA Distinguished Dissertation Award for this publication El-Hi Textbooks and Serials in Print ,2006 **Conquering Complexity** Mike Hinchey,Lorcan Coyle,2012-01-02 Software has long been perceived as complex at least within Software Engineering circles We have been living in a recognised state of crisis since the first NATO Software Engineering conference in 1968 Time and again we have been proven unable to engineer reliable software as easily cheaply as we imagined Cost overruns and expensive failures are the norm The problem is fundamentally one of complexity software is fundamentally complex because it must be precise Problems that appear to be specified quite easily in plain language become far more complex when written in a more formal notation such as computer code Comparisons with other engineering disciplines are deceptive One cannot easily increase the factor of safety of software in the same way that one could in building a steel structure for example Software is typically built assuming perfection often without adequate safety nets in case the unthinkable happens In such circumstances it should not be surprising to find out that seemingly minor errors have the potential to cause entire software systems to collapse The goal of this book is to uncover techniques that will aid in overcoming complexity and enable us to produce reliable dependable computer systems that will operate as intended and yet are produced on time in budget and are evolvable both over time and at run time We hope that the contributions in this book will aid in understanding the nature of software complexity and provide guidance for the control or avoidance of complexity in the engineering of complex software systems
