The Algebra Conspiracy Michael Wiener, 2000-09 The Algebra Conspiracy is an irreverent radical politically incorrect passionate challenge to the increasingly popular program of the educational establishment which requires every student to take two to four years of college preparatory mathematics to earn a high school diploma These well meaning but misguided people are placing every secondary school student into Algebra Geometry and Trigonometry classes that they may not want that they may not need to fulfill requirements for future employment or that they may not be academically equipped to handle This means for instance that a youngster who has trouble adding common fractions computing with percents or even making change on a ten dollar purchase will nevertheless be required to pass Algebra and Geometry In many school districts this is already creating an academic nightmare as more and more math teachers are faced with the Hobson's choice of either failing many of their students who simply cannot handle Algebra and Geometry or handing out numerous gift D's or severely watering down the college prep mathematics curriculum so more students can pass the classes The author takes the controversial view that the Age of Technology notwithstanding a large percentage of today's secondary school youngsters could if allowed live their entire adult working lives very

comfortably without ever being forced to set foot in Algebra and Geometry classrooms There are many other classes that these youngsters should be taking such as cultural or practical arts electives instead of wasting their time in college prep math classes

Occupational Outlook Quarterly ,1979 Connecting Abstract Algebra to Secondary Mathematics, for Secondary Mathematics Teachers Nicholas H. Wasserman,2018-12-12 Secondary mathematics teachers are frequently required to take a large number of mathematics courses including advanced mathematics courses such as abstract algebra as part of their initial teacher preparation program and or their continuing professional development The content areas of advanced and secondary mathematics are closely connected Yet despite this connection many secondary teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics including why and in what ways they may be important for secondary teachers Notably the volume disseminates research findings about how secondary teachers engage with and make sense of abstract algebra ideas both in general and in relation to their own teaching as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers especially in relation to abstract algebra as well as those who have engaged in related educational research The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra Connecting Abstract Algebra to Secondary Mathematics for Secondary Mathematics Teachers is a productive resource for mathematics teacher educators who teach capstone courses or content focused methods courses as well as for abstract algebra instructors interested in making connections to secondary mathematics
