**Theory and Practice** Harm Jan Smid, 2022-12-16 This book describes and analyses the history of Dutch mathematics education from the point of view of the changing motivations behind the teaching of mathematics over a 200 year period During the course of the 19th century mathematics in the Netherlands developed from a topic for practitioners into a school topic that was taught to almost all pupils of secondary education As mathematics teaching gradually lost its practical orientation and became more and more motivated on the basis of its supposed formative value the HBS Hogere Burgerschool the Dutch variant of the German Realschule became the dominant school of thought for mathematics pedagogy This book examines the gradual development of the field culminating in the country wide adoption of Realistic Mathematics Education as the new method of mathematics teaching This book is important for anyone who is interested in the history of mathematics education It provides an interesting perspective on the development of mathematics education in a country that in many aspects went its own way

[Interconnections for Computer Communications and Packet Networks](#) Roberto Rojas-Cessa, 2016-11-03 This book introduces different interconnection networks applied to different systems Interconnection networks are used to communicate processing units in a multi processor system routers in communication networks and servers in data centers Queuing techniques are applied to interconnection networks to support a higher utilization of resources There are different queuing strategies and these determine not only the performance of the interconnection network but also the set of requirements to make them work effectively and their cost Routing algorithms are used to find routes to destinations and directions in what information travels Additional properties such as avoiding deadlocks and congestion are sought Effective routing algorithms need to be paired up with these networks The book will introduce the most relevant interconnection networks queuing strategies and routing algorithm It discusses their properties and how these leverage the performance of the whole interconnection system In addition the book covers additional topics for memory management and congestion avoidance used to extract higher performance from the interconnection network

**The Oxford Handbook of Human Memory, Two Volume Pack** Michael J. Kahana, Anthony D. Wagner, 2024 The Oxford Handbook of Human Memory provides an authoritative overview of the science of human memory its application to clinical disorders and its broader implications for learning and memory in real world contexts Organized into two volumes and eleven sections the Handbook integrates behavioral neural and computational evidence with current theories of how we learn and remember Overall The Oxford Handbook of Human Memory documents the current state of knowledge in the field and provides a roadmap for the next generation of memory scientists established peers and practitioners

*Computer Algebra in Scientific Computing* Vladimir P. Gerdt, Wolfram Koepf, Werner M. Seiler, Evgenii V. Vorozhtsov, 2014-09-01 This

book constitutes the proceedings of the 16th International Workshop on Computer Algebra in Scientific Computing CASC 2014 held in Warsaw Poland in September 2014 The 33 full papers presented were carefully reviewed and selected for inclusion in this book The papers address issues such as Studies in polynomial algebra are represented by contributions devoted to factoring sparse bivariate polynomials using the priority queue the construction of irreducible polynomials by using the Newton index real polynomial root finding by means of matrix and polynomial iterations application of the eigenvalue method with symmetry for solving polynomial systems arising in the vibration analysis of mechanical structures with symmetry properties application of Gr bner systems for computing the absolute reduction number of polynomial ideals the application of cylindrical algebraic decomposition for solving the quantifier elimination problems certification of approximate roots of overdetermined and singular polynomial systems via the recovery of an exact rational univariate representation from approximate numerical data new parallel algorithms for operations on univariate polynomials multi point evaluation interpolation based on subproduct tree techniques
