

CONTINUOUS EXPONENTIAL GROWTH/DECAY

Notes & Practice

worlds, not all growth happens at regular intervals. Some things—like population, radioactive decay, and certain investments—grow or decrease continuously, every bit of the day. These scenarios don't follow simple, periodic changes but can all be modeled by **continuous exponential growth or decay**. Unlike discrete growth/decay, which happens once per month or year, **continuous** growth/decay assumes the quantity is constantly increasing or decreasing at every moment. In this, mathematicians use a special irrational number which we will explore below.

Let's put \$1 into a bank account that earns 100% annual interest. You ask the bank to compound interest more and more frequently:

Compounding Frequency	Formula	Amount After 1 Year
Once (Annually)	$A = 1 \left(1 + \frac{1}{1}\right)^1$	
Twice (Semi-annually)	$A = 1 \left(1 + \frac{1}{2}\right)^2$	
4 times (Quarterly)	$A = 1 \left(1 + \frac{1}{4}\right)^4$	
12 times (Monthly)	$A = 1 \left(1 + \frac{1}{12}\right)^{12}$	
365 times (Daily)	$A = 1 \left(1 + \frac{1}{365}\right)^{365}$	
8760 times (Hourly)	$A = 1 \left(1 + \frac{1}{8760}\right)^{8760}$	
Infinitely (Continuously)	$A = 1 \cdot e^1$	

...one a year, to monthly, to

CONTINUOUS GROWTH/DECAY

$$A = Pe^{rt}$$

P = the initial amount
 A = the amount after time t
 r = the growth/decay rate
 t = time

*A positive r indicates growth, a negative r indicates decay

1. A population of bacteria starts at 400 and grows continuously at a rate of 2% per hour. Write a function, $P(t)$, to model the bacteria population after t hours.

Determine the population of bacteria after one day. Round to the nearest whole number.

2. A medication is present in the bloodstream at a concentration of 100 mg and decays continuously at a rate of 10% per hour. Write a function, $M(t)$, to model the amount remaining in the bloodstream after t hours.

Determine how much medication is present in the bloodstream after 8 hours. Round to the nearest milligram.

3. A tree is planted in 2010 and has an initial height of 1.5 meters. The tree grows continuously at a rate of 3% per year. How tall will the tree be in 2030? Round to the nearest tenth of a meter.

4. A pollutant in a lake decays continuously at a rate of 7% per year. If the initial pollutant concentration is 500 ppm (parts per million) in 2020, what will the concentration be in 2030? Round to the nearest tenth.

Leiva, 1997 **Teaching and Learning High School Mathematics** Charlene E. Beckmann, Denise R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only

need to know mathematics content and mathematics pedagogy i.e. teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1.1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans
