

Part II: Answer all questions in this part. Each correct answer will receive 2 credits. Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. For all questions in this part, a numerical answer with no work shown will receive only 1 credit.

12. The results of a poll of 200 students are shown in the table below:

	Preferred Music Style		
	Rockers	Pop	Country
Female	14	25	27
Male	24	40	28

For this group of students, do these data suggest that gender and preferred music style are independent of each other? Justify your answer.

$$P(F \text{ and } T) = .27 \neq P(F) \cdot P(T) = .24$$

$$P(F|T) = .6 \neq P(F) = .53$$

$$\frac{27}{200} \neq \frac{59}{200} \cdot \frac{24}{200}$$

$$\frac{59}{90} \neq \frac{100}{200}$$

No
(use any combo)

13. The accompanying Venn diagram shows the results of a survey asking 100 people if they get their news by reading newspaper or by the internet.

$$\begin{array}{r} 100 \\ - 80 \\ \hline 20 \text{ neither} \end{array}$$

What is the probability that a person selected at random from this survey does not claim the internet as a source of getting the news? Show how you arrived at your answer.

15 newspaper only
20 neither

65% internet
So, 35% no int

$$\frac{35}{100} = .35 = 35\%$$

published in 1986 this book consists of 100 problems in probability and statistics together with solutions and most importantly extensive notes on the solutions The level of sophistication of the problems is similar to that encountered in many introductory courses in probability and statistics At this level straightforward solutions to the problems are of limited value unless they contain informed discussion of the choice of technique used and possible alternatives The solutions in the book are therefore elaborated with extensive notes which add value to the solutions themselves The notes enable the reader to discover relationships between various statistical techniques and provide the confidence needed to tackle new problems

Numerical Solution of Stochastic Differential Equations Peter E. Kloeden, Eckhard Platen, 2013-04-17 The aim of this book is to provide an accessible introduction to stochastic differential equations and their applications together with a systematic

presentation of methods available for their numerical solution During the past decade there has been an accelerating interest in the development of numerical methods for stochastic differential equations SDEs This activity has been as strong in the engineering and physical sciences as it has in mathematics resulting inevitably in some duplication of effort due to an unfamiliarity with the developments in other disciplines Much of the reported work has been motivated by the need to solve particular types of problems for which even more so than in the deterministic context specific methods are required The treatment has often been heuristic and ad hoc in character Nevertheless there are underlying principles present in many of the papers an understanding of which will enable one to develop or apply appropriate numerical schemes for particular problems or classes of problems
