Semialgebraic Statistics and Latent Tree Models Piotr Zwiernik, 2015-08-21 The first part of the book gives a general introduction to key concepts in algebraic statistics focusing on methods that are helpful in the study of models with hidden variables The author uses tensor geometry as a natural language to deal with multivariate probability distributions develops new combinatorial tools to study models with hidden data and describes the semialgebraic structure of statistical models The second part illustrates important examples of tree models with hidden variables The book discusses the underlying models and related combinatorial concepts of phylogenetic trees as well as the local and global geometry of latent tree models It also extends previous results to Gaussian latent tree models This book shows you how both combinatorics and algebraic geometry enable a better understanding of latent tree models It contains many results on the geometry of the models including a detailed analysis of identifiability and the defining polynomial constraints

Multivariate Approximation V. Temlyakov, 2018-07-19 Self contained presentation of multivariate approximation from classical linear approximation to contemporary nonlinear approximation

Quasi-Interpolation Martin Dietrich Buhmann, Martin Buhmann, Janin Jäger, 2022-03-03 Delve into an in depth description and analysis of quasi interpolation starting from various areas of approximation theory

Partial Differential Equation Methods for Image Inpainting Carola-Bibiane Schönlieb, 2015-10-26 This book introduces the mathematical concept of partial differential equations PDE for virtual image restoration It provides insight in mathematical modelling partial differential equations functional analysis variational calculus optimisation and numerical analysis It is addressed towards generally informed mathematicians and graduate students in mathematics with an interest in image processing and mathematical analysis

Greedy Approximation Vladimir Temlyakov, 2011-09-08 This first book on greedy approximation gives a systematic presentation of the fundamental results It also contains an introduction to two hot topics in numerical mathematics learning theory and compressed sensing Nonlinear approximation is becoming increasingly important especially since two types are frequently employed in applications adaptive methods are used in PDE solvers while m term approximation is used in image signal data processing as well as in the design of neural networks The fundamental question of nonlinear approximation is how to devise good constructive methods algorithms and recent results have established that greedy type algorithms may be the solution The author has drawn on his own teaching experience to write a book ideally suited to graduate courses The reader does not require a broad background to understand the material Important open problems are included to give students and professionals alike ideas for further research
