Writing Reaction Mechanisms in Organic Chemistry

Philippa H. Solomon, 1999-11-17 *Writing Reaction Mechanisms in Organic Chemistry* Second Edition is an invaluable guide to charting the movements of atoms and electrons in the reactions of organic molecules Miller and Solomon illustrate that understanding organic reactions is based on applying general principles rather than the rote memorization of unrelated processes and in turn emphasize that writing mechanisms is a practical method of applying knowledge of previously encountered reactions and reaction conditions to new reactions Students and research chemists alike will find this book useful in providing a method of organizing and synthesizing an oftentimes overwhelming quantity of information into a set of general principles and guidelines for determining and describing organic reaction mechanisms Illustrated with hundreds of chemical structures all redrawn from the first edition with added emphasis on three dimensional structures and stereochemical aspects of reaction mechanisms Extensively rewritten and reorganized to make the presentation and format more accessible to first year organic chemistry students as well as advanced undergraduate and graduate students Chapter 6 is completely revised to streamline the treatment of pericyclic reactions while introducing the principles underlying the symmetry operations and orbital correlation diagrams New appendixes in this edition contain easily referenced information on Lewis structures chemical symbols and notation and relative acidities of common functional groups

Science Inquiry, Argument and Language

, 2019-02-18 *Science Inquiry Argument and Language* describes research that has focused on addressing the issue of embedding language practices within science inquiry through the use of the Science Writing Heuristic approach In recent years much attention has been given to two areas of science education scientific argumentation and science literacy The research into scientific argument have adopted different orientations with some focusing on science argument as separate to normal teaching practices that is teaching students about science argument prior to using it in the classroom context while others have focused on embedding science argument as a critical component of the inquiry process The current emphasis on science literacy has emerged because of greater understanding of the role of language in doing and reporting on science Science is not viewed as being separate from language and thus there is emerging research emphasis on how best to improving science teaching and learning through a language perspective Again the research orientations are parallel to the research on scientific argumentation in that the focus is generally between instruction separate to practice as opposed to embedding language practices within the science classroom context
