Understanding the Digital World Brian W. Kernighan, 2017-01-24 The basics of how computer hardware software and systems work and the risks they create for our privacy and security Computers are everywhere Some of them are highly visible in laptops tablets cell phones and smart watches But most are invisible like those in appliances cars medical equipment transportation systems power grids and weapons We never see the myriad computers that quietly collect share and sometimes leak vast amounts of personal data about us Through computers governments and companies increasingly monitor what we do Social networks and advertisers know far more about us than we should be comfortable with using information we freely give them Criminals have all too easy access to our data Do we truly understand the power of computers in our world *Understanding the Digital World* explains how computer hardware software networks and systems work Topics include how computers are built and how they compute what programming is and why it is difficult how the Internet and the web operate and how all of these affect our security privacy property and other important social political and economic issues This book also touches on fundamental ideas from computer science and some of the inherent limitations of computers It includes numerous color illustrations notes on sources for further exploration and a glossary to explain technical terms and buzzwords *Understanding the Digital World* is a must read for all who want to know more about computers and communications It explains precisely and carefully not only how they operate but also how they influence our daily lives in terms anyone can understand no matter what their experience and knowledge of technology

Hegner, Paul Mc Kevitt, Peter Norvig, Robert L. Wilensky, 2012-12-06 In this international collection of papers there is a wealth of knowledge on artificial intelligence AI and cognitive science CS techniques applied to the problem of providing help systems mainly for the UNIX operating system The research described here involves the representation of technical computer concepts but also the representation of how users conceptualise such concepts The collection looks at computational models and systems such as UC Yucca and OSCON

programmed in languages such as Lisp Prolog OPS 5 and C which have been developed to provide UNIX help. These systems range from being menu based to ones with natural language interfaces some providing active help intervening when they believe the user to have misconceptions and some based on empirical studies of what users actually do while using UNIX. Further papers investigate planning and knowledge representation where the focus is on discovering what the user wants to do and figuring out a way to do it as well as representing the knowledge needed to do so. There is a significant focus on natural language dialogue where consultation systems can become active incorporating user modelling natural language generation and plan recognition modelling metaphors and users mistaken beliefs. Much can be learned from seeing how AI and CS techniques can be investigated in depth while being applied to a real test bed domain such as help on UNIX.

Advances in Teaching and Learning for Cyber Security Education Phil Legg, Natalie Coull, Charles Clarke, 2024-12-27 This book showcases latest trends and innovations for how we teach and approach cyber security education. Cyber security underpins the technological advances of the 21st century and is a fundamental requirement in today's society. Therefore how we teach and educate on topics of cyber security and how we overcome challenges in this space require a collective effort between academia, industry and government. The variety of works in this book include AI and LLMs for cyber security, digital forensics and how teaching cases can be generated at scale, events and initiatives to inspire the younger generations to pursue cyber pathways, assessment methods that provoke and develop adversarial cyber security mindsets and innovative approaches for teaching cyber management concepts. As a rapidly growing area of education, there are many fascinating examples of innovative teaching and assessment taking place. However, as a community, we can do more to share best practice and enhance collaboration across the education sector. CSE Connect is a community group that aims to promote sharing and collaboration in cyber security education so that we can upskill and innovate the community together. The chapters of this book were presented at the 4th Annual Advances in Teaching and Learning for Cyber Security Education conference hosted by CSE Connect at the University of the West of England, Bristol, UK, on July 2, 2024. The book is of interest to educators, students and practitioners in cyber security, both for those looking to upskill in cyber security education as well as those aspiring to work within the cyber security sector.
