Perturbing Problems in  $C^*$ -algebras Terry A. Loring, 1997-01-01 The techniques of universal algebra are applied to the  
 category of  $C$  algebras An important difference central to this book is that one can consider approximate representations of  
 relations and approximately commuting diagrams Moreover the highly algebraic approach does not exclude applications to  
 very geometric  $C$  algebras  $K$  theory is avoided but universal properties and stability properties of specific  $C$  algebras that  
 have applications to  $K$  theory are considered Index theory arises naturally and very concretely as an obstruction to stability  
 for almost commuting matrices Multiplier algebras are studied in detail both in the setting of rings and of  $C$  algebras Recent  
 results about extensions of  $C$  algebras are discussed including a result linking amalgamated products with the Busby  
 Hochschild theory     **New Learning Composite Mathematics 8** S.K. Gupta & Anubhuti Gangal, MAT000000 BISAC
