RECOMB 2003 Webb Miller, 2003 We study haplotype reconstruction under the Mendelian law of inheritance and the minimum recombination principle on pedigree data We prove that the problem of finding a minimum recombinant haplotype configuration MRHC is in general NP hard This is the first complexity result concerning the problem to our knowledge An iterative algorithm based on blocks of consecutive resolved marker loci called block extension is proposed It is very efficient and can be used for large pedigrees with a large number of markers especially for those data sets requiring few recombinants or recombination events A polynomial time exact algorithm for haplotype reconstruction without recombinants is also presented This algorithm first identifies all the necessary constraints based on the Mendelian law and the zero recombinant assumption and represents them using a system of linear equations over the cyclic group $\mathbb{Z}_2$ By using a simple method based on Gaussian elimination we could obtain all possible feasible haplotype configurations We have tested the block extension algorithm on simulated data generated on three pedigree structures The results show that the algorithm performs very well on both multi allelic and biallelic data especially when the number of recombinants is small

games and the aerospace industry *Capybara* José Roberto Moreira, Katia Maria P.M.B. Ferraz, Emilio A. Herrera, David W. Macdonald, 2012-08-16 The capybara is the neotropical mammal with the highest potential for production and domestication Amongst the favorable characteristics for domestication we can list its high prolificacy rapid growth rate a herbivorous diet social behavior and relative tameness The genus with only two species is found from the Panama Canal to the north of Argentina on the east of the Andes Chile is the only country in South America where the capybara is not found The species is eaten all over its range especially by poor rural and traditional communities engaged in subsistence hunting On the other hand in large urban settlements wildlife is consumed by city dwellers as a delicacy The sustainable management of capybara in the wild has been adopted by some South American countries while others have encouraged capybara rearing in captivity
