

REAR SHOCK ABSORBER

ADJUSTMENT

The rear shock absorber springs can be adjusted to five positions to compensate for various loads. For heavy loads, the springs should be compressed. For lighter loads the springs should be extended.

See Figure 2-61. To adjust the rear shock absorber, turn spring adjusting cam to desired position with spanner wrench. Both spring adjusting cams must be adjusted to the same position. When returning to off-cam position, cams should be backed off in opposite direction.

Figure 2-61. Rear Shock Absorber Spring Adjustment

REMOVAL

When removing the shocks for repair or replacement, remove and install one shock first, then the other. This will eliminate the need for raising the rear end of the motorcycle. If it is necessary to remove both shocks at once, place the motorcycle on a center stand with the rear wheel raised off the ground. See Figure 2-62. Remove the shock lower mounting bolt (1), lower nut (5), upper nut (5) and washer (3). Remove the shock (7), cover (9) and other washer (3).

NOTE

Shocks are non-repairable items, except for the rubber mounting bushings. If the shock is leaking or damaged, it must be replaced as an assembly.

motorcycle on a center stand with the rear wheel raised off the ground.
