Review of the Environmental Protection Agency's Draft IRIS Assessment of Formaldehyde National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee to Review EPA's Draft IRIS Assessment of Formaldehyde,2011-07-01 Formaldehyde is ubiquitous in indoor and outdoor air and everyone is exposed to formaldehyde at some concentration daily Formaldehyde is used to produce a wide array of products particularly building materials it is emitted from many sources including power plants cars gas and wood stoves and cigarettes it is a natural product in some foods and it is naturally present in the human body as a metabolic intermediate Much research has been conducted on the health effects of exposure to formaldehyde including effects on the upper airway where formaldehyde is deposited when inhaled and effects on tissues distant from the site of initial contact The U S Environmental Protection Agency EPA released noncancer and cancer assessments of formaldehyde for its Integrated Risk Information System IRIS in 1990 and 1991 respectively The agency began reassessing formaldehyde in 1998 and released a draft IRIS assessment in June 2010 Given the complexity of the issues and the knowledge that the assessment will be used as the basis of regulatory decisions EPA asked the National Research Council NRC to conduct an independent scientific review of the draft IRIS assessment In this report the Committee to Review EPA's Draft IRIS Assessment of Formaldehyde first addresses some general issues associated with the draft IRIS assessment The committee next focuses on questions concerning specific aspects of the draft assessment including derivation of the reference concentrations and the cancer unit risk estimates for formaldehyde The committee closes with recommendations for improving the IRIS assessment of formaldehyde and provides some general comments on the IRIS development process

Cellular and Molecular Toxicology J.P. Vanden Heuvel,W.F. Greenlee,G.H. Perdew,William B. Mattes,2002-02-14 Volume 14 in the series Comprehensive Toxicology extends and complements the previously published 13 volume set This volume will

be available separately Toxicology is the study of the nature and actions of chemicals on biological systems In more primitive times it really was the study of poisons However in the early 1500s it was apparent to Paracelsus that the dose differentiates a poison and a remedy Clearly the two most important tenets of toxicology were established during that time The level of exposure dose and the duration of exposure time will determine the degree and nature of a toxicological response Since that time the discipline of toxicology has made major advances in identifying and characterizing toxicants The growth of toxicology as a scientific discipline has been driven to a large extent by the use of extremely powerful molecular and cell biology techniques The overall aim of this volume is to demonstrate how these advances are being used to elucidate causal pathways or linkages for potential adverse health consequences of human exposure to environmental chemicals or radiation A unique feature of this volume is its illustration of how carefully designed studies of the molecular mechanisms of chemical action provide not only understanding of the potential toxicity of the chemical under investigation but also new insights into the functioning of the biological system used as an experimental model Each chapter contains a listing of major peer reviewed articles and reviews and useful web sites In addition each chapter contains a broad introductory section that outlines the subsequent sections These Introductory and Overview sections are designed to be stand alone chapters and may be packaged as a textbook in graduate level courses
