Determination of Blood Groups

INTRODUCTION

Blood is an internal body fluid that circulates. It is composed of two parts: a liquid part called Plasma, and a solid part called red blood cells (RBCs), white blood cells (WBCs), and platelets, which are the four primary components of blood. The blood is a vital element of the body since it is responsible for carrying oxygen and nutrients throughout the body so that it may continue to operate. There are four major blood types; A, B, AB, and O. There are also negative and positive factors that determine our blood types. O- is known as a universal donor, and AB+ is known as a universal recipient. It is necessary to determine our blood type. The video discussed the procedure of blood typing. Blood typing has been done to determine our blood type, which protects our safety when giving and receiving blood, and whether we have an RH factor on the surface of RBCs.
