Theories of Visual Attention - linking cognition, neuropsychology, and neurophysiology Søren Kyllingsbæk, Signe Allerup Vangkilde, Claus Bundesen, 2015-09-02 The Neural Theory of Visual Attention of Bundesen Habekost and Kyllingsbæk 2005 was proposed as a neural interpretation of Bundesen's 1990 theory of visual attention TVA In NTVA visual attention functions via two mechanisms by dynamic remapping of receptive fields of cortical cells such that more cells are devoted to behaviorally important objects than to less important ones filtering and by multiplicative scaling of the level of activation in cells coding for particular features pigeonholing NTVA accounts for a wide range of known attentional effects in human performance and a wide range of effects observed in firing rates of single cells in the primate visual system and thus provides a mathematical framework to unify the 2 fields of research In this Research Topic of Frontiers in Psychology some of the leading theories of visual attention at both the cognitive neuropsychological and neurophysiological levels are presented and evaluated In addition the Research Topic encompasses application of the framework of NTVA to various patient populations and to neuroimaging as well as genetic and psychopharmacological studies Fundamentals of Tests and Measures for the Physical Therapist Assistant Stacie J.
