Physics, Chemistry and Biology David D. Fang, 2018-11-09 Cotton fiber is the most important natural fiber used in the textile
industry The physical structure and chemical compositions of cotton fibers have been extensively studied Newer high speed
spinning instruments are being deployed around the world that demand longer stronger and finer fibers Consequently
genetic improvement in fiber quality has been stressed With improvement in fiber quality has come the realization that
further fiber improvement will require a better understanding of fiber development and biology As a consequence cotton
fiber developmental biology genetics and genomics have become focal points in the cotton research community As the
longest single celled plant hair cotton fiber has been used as an experiment model to study trichome initiation and elongation
in plants This book provides a comprehensive update on cotton fiber physics chemistry and biology that form the three
sections of the book In the physics section the physical structure of cotton fiber is first illustrated in great detail Then a suite
of fiber properties and their measuring methods are described The pros and cons of each method are outlined New methods

to measure physical properties of single fiber and young developing fibers are included In the chemistry section the chemical compositions of cotton fibers are described in detail This knowledge is necessary for efficient modification of cotton fibers for better and broader utilization The advancement in cotton fiber modification using chemical and enzymatic methods opened new ways to utilize cotton fibers In the biology section the book first introduces the utilization of naturally occurring color cottons Color cottons possess unique attributes such as better fire retardant ability Advancement in understanding fiber color genetics and biochemical pathways and new utilization of color cottons are discussed Recent technological advancements in molecular biology and genomics have enabled us to study fiber development in great depth Many genes and quantitative trait loci related to fiber quality attributes have been identified and genetically mapped Some of these genes and QTLs are being used in breeding Progresses in cotton fiber improvement using breeding and biotechnology are discussed in the last chapter This book serves as a reference for researchers students processors and regulators who either conduct research in cotton fiber improvement or utilize cotton fibers
