Developing Deep Knowledge in Middle School Mathematics Sergei Abramovich, Michael L. Connell, 2021-05-10 This textbook is for prospective teachers of middle school mathematics It reflects on the authors experience in offering various mathematics education courses to prospective teachers in the US and Canada In particular the content can support one or more of 24 semester hour courses recommended by the Conference Board of the Mathematical Sciences 2012 for the mathematical preparation of middle school teachers The textbook integrates grade appropriate content on all major topics in the middle school mathematics curriculum with international recommendations for teaching the content making it relevant for a global readership The textbook emphasizes the inherent connections between mathematics and real life since many mathematical concepts and procedures stem from common sense something that schoolchildren intuitively possess This focus on teaching formal mathematics with reference to real life and common sense is

essential to its pedagogical approach. In addition, the textbook stresses the importance of being able to use technology as an exploratory tool and being familiar with its strengths and weaknesses. In keeping with this emphasis on the use of technology, both physical manipulatives and digital commonly available educational software are explored, e.g., the use of computer graphing software for digital fabrication. In closing, the textbook addresses the issue of creativity as a crucial aspect of education in the digital age in general and in mathematics education in particular.

The Next Generation of Testing Hong Jiao, Robert W. Lissitz, 2015-11-01

The Race To The Top RTTP federal education policy fostered a new generation of state tests. This policy advocated adopting common core standards which set a higher level of learning targets for students in the US K-12 education. These standards are intended to assess higher order thinking skills and prepare students ready for college and career. In the meantime, they are aligned with those for international assessments which keep US students abreast of their international peers. Furthermore, the new generation of state tests requires the use of technology-enhanced items to align student assessments with the student learning environment. Computer technology is indispensable to accomplish this goal. Computer-based tests related to common core standards are different from previous state computer-based tests in two important aspects: one is that the current version requires accurate assessment of students along all ability levels, and the other is that it promotes the use of an efficient test delivery system, essentially the use of computerized adaptive assessment in K-12 state testing programs. In addition to providing summative information about student learning, the new common core tests add a formative assessment component in the whole assessment system to provide timely feedback to students and teachers during the process of student learning and teacher instruction. As with its predecessor, the new assessment policy also holds teachers and schools accountable for student learning. With the requirements by the new federal education policy, states formed two consortia: Partnership for Assessment of Readiness for College and Careers (PARCC) and Smarter Balanced Assessment Consortium (SBAC) to develop assessments in alignment with the new common core standards. This book is based on the presentations made at the Thirteenth Annual Maryland Assessment Research Center's Conference on The Next Generation of Testing. Common Core Standards Smarter Balanced PARCC and the Nationwide Testing Movement Experts from the consortia and nationwide overviewed the intention, history, and the current status of this nationwide testing movement. Item development, test design, and transition from old state tests to the new consortia tests are discussed. Test scoring and reporting are specially highlighted in the book. The challenges related to standard setting for the new test, especially in the CAT environment and linking performance standards from state tests with consortium tests, were explored. The issues of utilizing the consortium test results to evaluate students' college and career readiness is another topic addressed in the book. The last chapters address the critical issue of validity in the new generation of state testing programs. Overall, this book presents the latest status of the development of the two consortium assessment systems. It addresses the most challenging issues related to the next generation of state testing programs, including development of innovative items.

information on world religions has been introduced the emphasis remains on teaching Sunni Muslim religious practices Children of Jewish and Christian families may apply to opt out but the process can be cumbersome and in many schools alternatives are not provided for them Non Muslim students who have opted out can still find themselves having to remain in the religious instruction class or alternatively having to wander in the school corridor making them vulnerable to taunts from pupils and even teachers The opt out possibility is still not available to children of other minorities Another issue is mother tongue education In 2012 a new elective on the living languages and dialects in Turkey was introduced but due to various limitations minorities remain marginalised others in the education system Subsequent to the 2012 reform the report monitors discrimination in the formal education system in the period of the academic year of 2014 2015 The findings are based on the field work of the Monitoring Discrimination in Education Network an alliance of 16 organizations working in Turkey The report compiles numerous cases of discrimination based on language religion ethnicity skin colour and the level of income In order to bring about a fundamental solution to these problems in the education system the government must prioritise developing an approach that sees all groups as equal and that responds to demands for rights based on such an understanding of equality says Kaya The report highlights that Turkey has no anti discrimination law or an equality commission to which victims of discrimination can apply The existing legislation contains no effective and accessible means of judicial remedies or compensation Therefore many discriminatory practices are not reported to school administrations The entire education system is based on Turkishness Non Turkish groups are either not referred to or referred in a negative way says Kaya Education system has played a significant role in deepening conflict in society The positive representation of other groups in the education system would contribute to social peace and harmony In order to resolve the many problems in the education system that the current approach causes the overall aim of government education policy should be cleared of ideological references and the protection of children s best interests and the right to education in line with international standards should be considered its fundamental goal says the report

Computational Experiment Approach to Advanced Secondary Mathematics Curriculum Sergei Abramovich, 2014-05-08 This book promotes the experimental mathematics approach in the context of secondary mathematics curriculum by exploring mathematical models depending on parameters that were typically considered advanced in the pre digital education era This approach by drawing on the power of computers to perform numerical computations and graphical constructions stimulates formal learning of mathematics through making sense of a computational experiment It allows one in the spirit of Freudenthal to bridge serious mathematical content and contemporary teaching practice In other words the notion of teaching experiment can be extended to include a true mathematical experiment When used appropriately the approach creates conditions for collateral learning in the spirit of Dewey to occur including the development of skills important for engineering applications of mathematics In the context of a mathematics teacher education program the book addresses a call for the preparation of teachers capable of

utilizing modern technology tools for the modeling based teaching of mathematics with a focus on methods conducive to the improvement of the whole STEM education at the secondary level By the same token using the book s pedagogy and its mathematical content in a pre college classroom can assist teachers in introducing students to the ideas that develop the foundation of engineering profession
