

This regulation has high difficulty because of high variety from the fixed assets they owned. This regulation also stated that every fixed asset class has certain economic useful time. Estimate economic time of fixed asset is prohibited. In financial standards, taxpayer can estimate fixed asset economic time. The different age of the fixed assets under both of regulation is very influential in the fixed asset depreciation calculation.

Some of differences come when IAI (Indonesia Accounting Institute) decide to adopted IFRS for Indonesian Financial Accounting Standard (Ratumananingsih et al, 2013). First difference is about fixed asset evaluation. Based on the Financial Accounting Standards (PSAK) No. 16 (Revised in 2011), paragraph 24, says that there is prohibition to measure fixed assets evaluation. Opposite from that regulation, based on Finance Minister Regulation No. 79/PMK.01/2008, a fixed asset evaluation conducted should have a permission of the Minister. This regulation also stated that fixed asset evaluation can only be done once in 5 years. The two condition must be fulfilled in order revaluated fixed asset. This difference makes tax payer must re-evaluated fixed asset value every time they do fixed asset evaluation, but they can't fulfill required condition in Finance Minister Regulation No. 79/PMK.01/2008. Other difference which caused by IFRS adoption is about fixed asset impairment. IFRS said that fixed asset impairment can be done when the organization estimates that there is reduction of fixed asset value, or if there is potentially asset reduction. Fixed asset impairment under IFRS is possibly done at any time. Opposite of IFRS, taxation regulation prohibited impairment. In taxation value of existing fixed assets is historical, not estimation value, so there is impossible for fixed asset impairment.

2.2 Technology Acceptance Model (TAM)

In general, research on the behavioral aspects of technology adoption derived from the some psychology theory. In this study, the main research base used is the Technology Acceptance Model (TAM) developed by Davis (Davis, 1989) from the Theory of Reasoned Action. TAM is a theory that is used to predict the acceptability (acceptability) or adoption of a tool or technology and identify possible modifications needed for the technology to be accepted by users. TAM explained that the acceptance of a technology is increased based on two main things that perceived benefits (perceived usefulness) and perceived ease of use. Perceived ease of use also contributed instrumental in improving the performance of a person. The easier the use of an information system means less and less effort means a person must do in order to improve its performance by using the information system. By using the accounting software program taxation fixed assets that have to accommodate the needs of both IFRS standards compliance tax regulation, so users will be able to reduce their effort required to improve performance.

2.3 Reinforcement Theory

Selection of a method or system that is used by the taxpayer will always be influenced by motivation businesses in conducting their business activities. Motivation is generally arise when the officer knows the needs and shortcomings of activities, then look for ways to satisfy his needs. Achievement of these activities behavioral activities directed at the expected goals. It will be more influenced in the performance. Then he would measure his needs after seeing the results or impact of the performance obtained is done. The extent to which positive or negative impact that he got the action he did to fulfill the needs and shortcomings faced.

One of the theories of motivation is the theory of reinforcement. This reinforcement theory states that behavior is influenced consequences (Gibson, 2003). Based on the theory of strengthening managerial perspective will be very influential when he realized the benefits or positive consequences of the use of accounting software tax fixed assets compared to using manual calculation. Similarly, a taxpayer's motivation for choosing the method of tax reporting preparation will be influenced by how large the benefits of the system are presented. The higher the benefits of the use of accounting information it will motivate taxpayers to use a particular system is the most profitable for him.

2.4 Hypotheses Development

Reinforcement Theory states that behavior is influenced consequences (Gibson, 2003). In the perspective of strengthening managerial decision making theory will be very influential when he realized the benefits or positive consequences. If the existing systems are considered able to improve their performance then they will tend to use the system. Therefore, the perception of the usefulness of the system for users becomes important. Both groups of potential users have different characteristics. Consultants handle fixed assets of more than one companies, perhaps even reach a dozen companies. Therefore consulting group is required in terms of performance compared to the taxpayer. High demands will motivate them to look for ways to make its work more efficiently. The new system becomes more useful for consultants who have to deal with more assets. The first hypothesis is formulated as follows:
H1: There are differences in the Perceived Usefulness (PU) are perceived by the taxpayer and Consultant.

Acceptance of the new system was developed greatly influenced by how easily the system can be used. Both groups of potential users of this new software has different levels of experience in calculating fixed assets. Consultant
