Applications of Mathematics in Science and Technology Bui Thanh Hung,M. Sekar,Ayhan ESI,R. Senthil

Kumar,2025-04-29 The Conference dealt with one of the most important problems faced in International development in Pure Mathematics and Applied mathematics development in engineering such as Cryptography Cyber Security Network Operations Research Heat Equation and so forth The aim of the conference was to provide a platform for researchers engineers academicians as well as industrial professionals to present their research results and development activities in Pure and Apply Mathematics and its applied technology It provided opportunities for the delegates to exchange new ideas and application experiences to establish business or research relations and to find global partners for future collaboration

Low Power Circuit Design Using Advanced CMOS Technology Milin Zhang,Zhihua Wang,Jan Van der Spiegel,2022-09-01

Low Power Circuit Design Using Advanced CMOS Technology is a summary of lectures from the first Advanced CMOS Technology Summer School ACTS 2017 The slides are selected from the handouts while the text was edited according to the lecturers talk ACTS is a joint activity supported by the IEEE Circuit and System Society CASS and the IEEE Solid State Circuits Society SSCS The goal of the school is to provide society members as well researchers and engineers from industry the opportunity to learn about new emerging areas from leading experts in the field ACTS is an example of high level continuous education for junior engineers teachers in academe and students ACTS was the results of a successful collaboration between societies the local chapter leaders and industry leaders This summer school was the brainchild of Dr Zhihua Wang with strong support from volunteers from both the IEEE SSCS and CASS In addition the local companies Synopsys China and Beijing IC Park provided support This first ACTS was held in the summer 2017 in Beijing The lectures were given by academic researchers and industry experts who presented each 6 hour long lectures on topics covering process technology EDA skill and circuit and layout design skills The school was hosted and organized by the CASS Beijing Chapter SSCS Beijing Chapter and SSCS Tsinghua Student Chapter The co chairs of the first ACTS were Dr Milin Zhang Dr Hanjun Jiang and Dr Liyuan Liu The first ACTS was a great success as illustrated by the many participants from all over China as well as by the publicity it has been received in various media outlets including Xinhua News one of the most popular news channels in China

Remote Sensing Applications in Oceanography with Deep Learning Muhammad Yasir,Shah Nazir,Chao Chen ,Weimin Huang,2025-10-30 Remote sensing technology has revolutionized ocean exploration allowing researchers to monitor and understand various oceanographic processes and phenomena on a global scale Remote sensing which involves the use of satellites and aircraft to collect data about the planet s surface and atmosphere enables scientists to monitor oceanic conditions in real time track changes in sea level and analyse marine ecosystems Deep learning plays a pivotal role in enhancing remote sensing technology revolutionizing how we collect interpret and utilize vast amounts of environmental data By leveraging deep learning remote sensing can identify subtle patterns and anomalies that traditional methods might miss such as climate change impacts Together remote sensing and ocean exploration enhance our ability to

protect marine environments sustain biodiversity and address global challenges like climate change and sustainable development These advancements not only deepen our scientific knowledge but also inform policy decisions and conservation efforts ensuring the health and resilience of the world's oceans for future generations This Research Topic compiles the latest research and developments in the application of remote sensing techniques particularly using deep learning methods to improve our understanding of the oceans We invite original research articles reviews and case studies on the following topics Advanced remote sensing techniques for ocean observation including deep learning based approaches Integration of satellite aerial and in situ data for oceanographic studies using deep learning Machine learning and artificial intelligence algorithms optimized for ocean remote sensing Hyperspectral and multispectral imaging for marine applications enhanced by deep learning techniques SAR Synthetic Aperture Radar applications in oceanography with deep learning models Remote sensing of coastal and estuarine environments using deep learning architectures Monitoring of harmful algal blooms using deep learning algorithms applied to remote sensing data Deep learning based approaches for remote sensing of coral reefs and marine habitats Applications of deep learning in fisheries management utilizing remote sensing data Deep learning based assessment of climate change impacts on oceans using remote sensing datasets Manuscripts relating to practical applications in ecological monitoring and marine target tracking can be submitted to the Research Topic Remote Sensing Applications in Marine Ecology Monitoring and Target Sensing <https://www.frontiersin.org/research-topics/64528/remote-sensing-applications-in-marine-ecology-monitoring-and-target-sensing> Applications of Machine Learning in Volcanology Bellina Di Lieto, Pierdomenico Romano, Silvia Scarpetta, Yosuke Aoki, Carmen Benítez, 2025-04-29 The characterization of volcano state is not a simple task due to the complexity of physics processes underway Understanding their evolution prior to and during eruptions is a critical point for identifying transitions in volcanic state Permanent monitoring networks are developed for such a purpose With the increase of the number of monitoring sites the amount of available continuous data coming from different sources infrasonic seismic GPS geochemical etc has increased exponentially and extracting the huge amount of information this data brings represents a non trivial task for researchers who are always more often looking at the potentiality of computer algorithms to find correlations among them Recent developments in the field of Machine Learning ML have proven to be very useful and efficient for automatic discrimination decision prediction clustering and information extraction in many fields including volcanology In recent times Deep Learning has seen rapid growth in its popularity along with other supervised strategies such as Support Vectors Machines and Recurrent neural networks RNN which have consistently been applied with success to broader and broader sets of applications and fields However supervised machine learning requires labels for training and obtaining these labels for large volumes of seismic and volcanic data is a very demanding and challenging task Therefore semi supervised and unsupervised methods such as Self organized Maps have been applied with success to extract relevant information from huge amounts of unlabelled data In seismic and deformative

data processing these techniques are used for waveform inversion automatic picking of first arrivals and interpretation of peculiar characteristics of transients ML is helpful in the discrimination of magmatic complexes in distinguishing tectonic settings of volcanic rocks in the evaluation of correlations between volcanic signals and the chemico physical composition of erupted materials Other applications of ML in volcanology include the analysis and classification of geological geochemical and petrological static data to infer for example the possible source and mechanism of observed deposits the analysis of satellite imagery to quickly classify vast regions difficult to investigate on the ground or again to detect changes that could indicate an unrest The results obtained with the help of these algorithms would otherwise represent for researchers tasks hard to be solved with the usual standard methodologies
