Nearly 40 percent of the students entering 2 and 4 year postsecondary institutions indicated their intention to major in science technology engineering and mathematics STEM in 2012 But the barriers to students realizing their ambitions are reflected in the fact that about half of those with the intention to earn a STEM bachelor s degree and more than two thirds intending to earn a STEM associate s degree fail to earn these degrees 4 to 6 years after their initial enrollment Many of those who do obtain a degree take longer than the advertised length of the programs thus raising the cost of their education Are the STEM educational pathways any less efficient than for other fields of study How might the losses be stemmed and greater efficiencies realized These questions and others are at the heart of this study Barriers and Opportunities for 2 Year and 4 Year STEM Degrees reviews research on the roles that people processes and institutions play in 2 and 4 year STEM degree production This study pays special attention to the factors that influence students decisions to enter stay in or leave STEM majors quality of instruction grading policies course sequences undergraduate learning environments student supports co curricular activities students general academic preparedness and competence in science family background and governmental and institutional policies that affect STEM educational pathways Because many students do not take the traditional 4 year path to a STEM undergraduate degree Barriers and Opportunities describes several other common pathways and also reviews what happens to those who do not complete the journey to a degree This book describes the major changes in student demographics how students view value and utilize programs of higher education and how institutions can adapt to support successful student outcomes In doing so Barriers and Opportunities questions whether definitions and characteristics of what constitutes success in STEM should change As this book explores these issues it identifies where further research is needed to build a system that works for all students who aspire to STEM degrees The conclusions of this report lay out the steps that faculty STEM departments colleges and universities professional societies and others can take to improve STEM education for all students interested in a STEM degree

Food Safety Law in China Francis Snyder, 2015-12-22 This book is the first major study of the making of transnational food safety law in China Francis Snyder shows how the 2008 melamine infant formula crisis led to China's first food safety law and new food safety standards substantial reforms in government policy and closer relations with international organisations He also identifies current and future challenges and makes recommendations for dealing with them Chinese food safety law today is influenced strongly by cross border factors While transnational regimes help to shape domestic decisions many institutions deeply embedded in Chinese society have played key roles in this transformation Francis Snyder emphasises that in finding its own path toward ensuring food safety China can both learn from and teach other countries In May 2017 this title has been awarded a Gourmand World Cookbook Award in Yantai Shandong Province China Best in the World in two categories Best Wine Law Book and Food Safety Institutions

Unforgettable W. Michael Gray, 2016-10-12 We have an uneasy relationship with the relentless deluge of information gushing out of academia and our media outlets To turn it off is escapist but to attempt to cognitively grapple with it is overwhelming In *Unforgettable* Enabling Deep and Durable Learning a nationally recognized master teacher gives professors and their students the means to chart a clear path through this information explosion Humans crave explanatory patterns and this book enables teachers to think deeply about their academic disciplines to find and articulate their core explanatory principles and to engage their students in a compelling way of thinking An alternative title for this book could be *Why the Best College Teachers Do What They Do* because the author articulates a compelling rationale that will equip faculty to create and deliver transformative courses Students in transformative courses grapple with essential questions and gain mental muscle that equips them for real world challenges
