GRAPHING LINEAR EQUATIONS (By Slope-Intercept)		Use the steps below to graph an equation using slope-intercept form.	
1		Write the equation in slope-intercept form.	
		2 Graph the y -intercept. This is always point (0, b).	
		3 Use the slope of the line to create more points. Remember slope is $\frac{rise}{run}$.	
		4 Use a ruler to draw a line that extends through the points, placing an arrow at both ends.	
Directions: Graph each equation using the slope-intercept method.			
1. $y = -2x + 3$		2. $y = -3x - 1$	
			
4. $y = -\frac{1}{2}x + 3$		5. $y = 2x + 5$	
			
8. $y = -4x$		7. $y = -3x + 5x$	
			
		9. $y = 1 - \frac{3}{2}x$

Small,2007-04-03 Over the years a number of books have been written on the theory of functional equations However very little has been published which helps readers to solve functional equations in mathematics competitions and mathematical problem solving This book fills that gap The student who encounters a functional equation on a mathematics contest will need to investigate solutions to the equation by finding all solutions or by showing that all solutions have a particular property The emphasis here will be on the development of those tools which are most useful in assigning a family of solutions to each functional equation in explicit form At the end of each chapter readers will find a list of problems associated with the material in that chapter The problems vary greatly with the easiest problems being accessible to any high school student who has read the chapter carefully The most difficult problems will be a reasonable challenge to advanced students studying for the International Mathematical Olympiad at the high school level or the William Lowell Putnam Competition for university undergraduates The book ends with an appendix containing topics that provide a springboard for further investigation of the concepts of limits infinite series and continuity **Core Focus on Linear Equations** Shannon McCaw,2012-08-15 **Linear Integral Equations** Ram P.
