### RULES OF DIVISIBILITY

Does it divide evenly or not? These are quick tips:

- **Divisibility by 2:** Number ends in 0, 2, 4, 6, 8.  
Examples: 20, 68, 1,138, 300,000
- **Divisibility by 4:** Last two digits form a number divisible by 4.  
Examples: 234,516, 113,552,000
- **Divisibility by 8:** Last three digits form a number divisible by 8.  
Examples: 431,320 (320 ÷ 8 = 40), 1,553,136 (136 ÷ 8 = 17)
- **Divisibility by 5:** Number ends in 0, 5.  
Examples: 333,345, 431,320
- **Divisibility by 10:** Number ends in 0.  
Examples: 111,222,330, 44,000,000
- **Divisibility by 3:** Sum of digits is a multiple of 3.  
Example: 48,235,112 (4 + 8 + 2 + 3 + 5 + 1 + 1 + 2 = 26)
- **Divisibility by 9:** Sum of digits is a multiple of 9.  
Example: 23,000,004 (2 + 3 + 0 + 0 + 0 + 0 + 4 = 9)

- **Divisibility by 11:** Difference between the sums of the alternating digits is divisible by 11 (result is 0, 11, 22, ...).  
Example: 585,387 (1 + 5 + 8 + 7 = 21; 4 + 3 + 7 = 14; 21 - 14 = 0)
- **Divisibility by 6:** Divisible by both 2 and 3.  
Example: 23,514 (Ends in 4, sum of digits is 15)
- **Divisibility by 12:** Divisible by both 3 and 4.  
Example: 113,628 (Sum of digits is 21; last two digits form "28")

#### Rules of divisibility for multiples

The numbers in the product can't have common factors:

- **Divisibility by 6:** Use rules for 2 and 3.
- **Divisibility by 12:** Use rules for 3 and 4 (can't use 2 and 6).
- **Divisibility by 15:** Use rules for 3 and 5.
- **Divisibility by 18:** Use rules for 2 and 9 (can't use 3 and 6).
- **Divisibility by 24:** Use rules for 3 and 8 (can't use 4 and 6).

And so on.

 A rule for divisibility by 7, 11, or 13 is that you divide the number in question by 1,001 and then look at the remainder. If the remainder is divisible by 7, 11, or 13, then the original number is divisible by that factor.

### ORDER OF OPERATIONS

The correct order for performing operations is necessary to get the correct answer. When two operations in the same "level" occur in an expression, perform the operations in order, moving from left to right.

Using the order of operations to simplify:  
3 · 2<sup>2</sup> - 2 · 25 ÷ 4

**Step 1: Perform all powers and roots.**

Raise 2 to the fourth power and find the square root of 25.

$$= 3 \cdot 16 - 2 \cdot 5 \div 4$$

**Step 2: Perform all multiplications and divisions.**

Multiply the 3 and 16 and then the 2 and 5.

$$= 48 - 10 \div 4$$

 Remember that multiplication can be indicated by a dot, a times sign, ×, an asterisk, \*, or by parentheses, ().

**Step 3: Perform all additions and subtractions.**

Subtract 10 from 48 and then add 4.

$$= 38 + 4 = 42$$

 Grouping symbols can "interfere" with the order of operations. Perform any

operations inside the grouping symbols first, before applying the order of operations.

Using the order of operations to simplify:

$$3(4 - 5) + 2\sqrt{50} - 1 + \frac{3 + 11}{9 - 2}$$

**Tackle the grouping symbols (parentheses, brackets, radicals, fraction lines).**

Subtract 5 from 4, then subtract 1 from 10, then add 3 and 11, then subtract 2 from 9.

$$= 3(-1) + 2\sqrt{50} - \frac{14}{7}$$

Now to the order of operations.

**Step 1: Perform all powers and roots.**

Find the square root of 50.

$$= 3(-1) + 2 \cdot 5\sqrt{2} - \frac{14}{7}$$

**Step 2: Perform all multiplications and divisions.**

Multiply the 3 and -1, then the 2 and 5, then divide 14 by 7.

$$= -3 + 10 + 2$$

**Step 3: Perform all additions and subtractions.**

Add the -3 and 5, then add the 2.

$$= 5 + 2 = 7$$

 When there is no exponent showing, such as with  $x$ , you assume the exponent is 1.

 To solve exponential equations when the bases are powers of the same number, rewrite each as  $2^x = 2^y$  and solve  $x = y$ .  
Given  $4^{x+1} = 8^{x-2}$  write each base as a power of 2. ( $2^2$ )<sup>x+1</sup> = ( $2^3$ )<sup>x-2</sup> becomes  $2^{2x+2} = 2^{3x-6}$ . Now solve  $2x + 2 = 3x - 6$  giving  $x = 14$ .

### RULES FOR USING EXPONENTS

An exponent is a shorthand notation telling you how many times to apply the base number. Exponents are written as superscripts and can be positive, negative, whole numbers, or fractions. Each has its own meaning.

**Algebra of Conscience** V.A. Lefebvre, 2013-04-17 Conscience is an essential human attribute Nevertheless in the construction of formal models of the subject it is customarily left outside the framework of theoretical analysis The Algebra of Conscience whose first edition appeared in 1982 was the first specialized work modeling the phenomenon of conscience The method used in this book made it possible to connect moral experience with decision making procedures on the level of mathematical models The application of such models allows us to propose the hypothesis of two fundamentally different ethical systems determining the normative patterns of human behavior in situations of conflict Under the first ethical system the subject's self esteem is raised if the subject seeks to resolve the conflict in the second it is raised by seeking to dramatize the conflict The new edition of The Algebra of Conscience is significantly expanded The second part of the book devoted to moral choice is completely new Based on the theory presented in the first part it constructs the model of a subject capable of making an intentional choice A special variable corresponds to the subject's intention This development allows us to include within the model freedom of will and freedom of choice and also to generalize classical 2 2 game theory to the case where outcomes in addition to having utility measures are either positive or negative In its concluding chapters the book constructs a dynamic model of the intentional subject faced with a choice between two alternatives neither of which is morally acceptable for the subject It is shown that in this case the probabilities of choice of the alternatives may change chaotically From this it follows that one cannot predict which alternative will be chosen or even the probabilities with which they will be chosen Audience The book is addressed to a broad readership having elementary knowledge of mathematical logic and the theory of probability It can be used in college courses studying the modelling of moral choice The book's material can also be used in the design of artificial intelligence systems
