Activities in Pre Algebra is a set of versatile enrichment exercises that covers a very broad range of mathematical topics and applications from the Moebius strip to the googol Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to people who thought they didn't like mathematics To accomplish this it is necessary for the activities to be quite different from what students encounter in their basal texts different in both substance and form This seems especially critical no matter how excellent a basal text is being used nearly every class experiences the blahs Unfortunately this sort of boredom is often well entrenched long before the teacher and perhaps even the students are aware of it Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject

Graduate Algebra: Noncommutative View Louis Halle Rowen,2008 This book is an expanded text for a graduate course in commutative algebra focusing on the algebraic underpinnings of algebraic geometry and of number theory Accordingly the theory of affine algebras is featured treated both directly and via the theory of Noetherian and Artinian modules and the theory of graded algebras is included to provide the foundation for projective varieties Major topics include the theory of modules over a principal ideal domain and its applications to matrix theory including the Jordan decomposition the Galois theory of field extensions transcendence degree the prime spectrum of an algebra localization and the classical theory of Noetherian and Artinian rings Later chapters include some algebraic theory of elliptic curves featuring the Mordell Weil theorem and valuation theory including local fields One feature of the book is an extension of the text through a series of appendices This permits the inclusion of more advanced material such as transcendental field extensions the discriminant and resultant the theory of Dedekind domains and basic theorems of rings of algebraic integers An extended appendix on derivations includes the Jacobian conjecture and Makar Limanov's theory of locally nilpotent derivations Gröbner bases can be found in another appendix Exercises provide a further extension of the text The book can be used both as a textbook and as a reference source

Planting the Seeds of Algebra, PreK-2 Monica Neagoy,2012-04-20 The subject of algebra has always been important in American secondary mathematics education However algebra at the elementary level has been

garnering increasing attention and importance over the past 15 years There is consequently a dire need for ideas suggestions and models for how best to achieve pre algebraic instruction in the elementary grades Planting the Seeds of Algebra will empower teachers with theoretical and practical knowledge about both the content and pedagogy of such instruction and show them the different faces of algebra as it appears in the early grades The book will walk teachers of young children through many examples of K 6 math lessons and unpack step by step the hidden connections to higher algebra After reading this book teachers will be better equipped
