You'll learn how to install FMS3, organize your development environment with Apache web server, and use the management console before diving into the whys and hows of recording and playing back streaming audio and video in VP6 and H.264 formats. Using the new Flash Media Encoder to stream and record video. Camera and microphone settings. Non-persistent client-side remote shared objects. Two-way audio/video communications. Broadcasting and server-side bandwidth control. Working with server-side files, the file class. Server-side shared objects. Server-side streams. Setting up a software load handler using FMS3's new server-side NetStream. Bringing in data and working with configuration files. At the heart of every chapter is a core set of code that shows the minimum requirements needed for different procedures. Beyond that, *Learning Flash Media Server 3* provides you with plenty of options for using FMS3's different versions: the full-featured server, the streaming-only server, and the limited user development server.
