A. Cameron, P. H. Huff, 1962 The energy dependent film badges which also were strongly direction dependent indicated that the radiation near the bottom of the structures was approximately isotropically distributed However calculated doses at individual badge locations based on the isotropic distribution did not agree well with observed doses In all cases the peak accelerations recorded inside the shelters were higher than the corresponding free field peaks Consequently it is recommended that until further information is available the predicted free field peak motions acceleration velocity and displacement be multiplied by 1.5 to predict the

corresponding peaks inside structures similar to those observed in this test
