Financial Analysts' Forecasts and Stock Recommendations Sundaresh Ramnath, Steve Rock, Philip B. Shane, 2008 Financial Analysts Forecasts and Stock Recommendations reviews research related to the role of financial analysts in the allocation of resources in capital markets The authors provide an organized look at the literature with particular attention to important questions that remain open for further research They focus research related to analysts decision processes and the usefulness of their forecasts and stock recommendations Some of the major surveys were published in the early 1990 s and since then no less than 250 papers related to financial analysts have appeared in the nine major research journals that we used to launch our review of the literature The research has evolved from descriptions of the statistical properties of analysts forecasts to investigations of the incentives and decision processes that give rise to those properties However in spite of this broader focus much of analysts decision processes and the market's mechanism of drawing a useful consensus from the combination of individual analysts decisions remain hidden in a black box What do we know about the relevant valuation metrics and the mechanism by which analysts and investors translate forecasts into present equity values What do we know

about the heuristics relied upon by analysts and the market and the appropriateness of their use Financial Analysts Forecasts and Stock Recommendations examines these and other questions and concludes by highlighting area for future research
