

Problem 1 – Mathematics (Analytic Geometry)

Find the distance from the point (5, -3) to the line $7x - 4y - 28 = 0$.

Solution:

$$d = \frac{Ax_1 + By_1 + C_1}{\sqrt{A^2 + B^2}}$$

$$d = \frac{(-) (7x_1 - 4y_1 + 28)}{(-) \sqrt{(7)^2 + (-4)^2}}$$

$$d = \frac{7(5) - 4(-3) - 28}{\sqrt{65}}$$

$$d = 2.36$$

Problem 2 – Mathematics (Analytic Geometry)

Find the area bounded by the line $2x - y + 10 = 0$ and the coordinate axes.

Solution:

$$2x - y + 10 = 0$$

$$\begin{array}{ll} \text{when } x = 0 & y = 10 \\ & x = -5 \end{array}$$

$$A = \frac{5(10)}{2}$$

$$A = 25$$

Analytic Research Foundations for the Next-Generation Electric Grid
 National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on
 Mathematical Sciences and Their Applications, Committee on Analytical Research Foundations for the Next-Generation
 Electric Grid, 2016-05-15 Electricity is the lifeblood of modern society and for the vast majority of people that electricity is
 obtained from large interconnected power grids However the grid that was developed in the 20th century and the
 incremental improvements made since then including its underlying analytic foundations is no longer adequate to completely
 meet the needs of the 21st century The next generation electric grid must be more flexible and resilient While fossil fuels will
 have their place for decades to come the grid of the future will need to accommodate a wider mix of more intermittent
 generating sources such as wind and distributed solar photovoltaics Achieving this grid of the future will require effort on
 several fronts There is a need for continued shorter term engineering research and development building on the existing
 analytic foundations for the grid But there is also a need for more fundamental research to expand these analytic foundations
 Analytic Research Foundations for the Next Generation Electric Grid provide guidance on the longer term critical areas for
 research in mathematical and computational sciences that is needed for the next generation grid It offers recommendations

that are designed to help direct future research as the grid evolves and to give the nation's research and development infrastructure the tools it needs to effectively develop test and use this research *Theory of the Spread of Epidemics and Movement Ecology of Animals* V. Bailey, 2020-08-03 Faults commonly trap fluids such as hydrocarbons and water and therefore are of economic significance During hydrocarbon field development smaller faults can provide baffles and or conduits to flow There are relatively simple well established workflows to carry out a fault seal analysis for siliciclastic rocks based primarily on clay content There are however outstanding challenges related to other rock types to calibrating fault seal models with static and dynamic data and to handling uncertainty The variety of studies presented here demonstrate the types of data required and workflows followed in today's environment in order to understand the uncertainties risks and upsides associated with fault related fluid flow These studies span all parts of the hydrocarbon value chain from exploration to production but are also of relevance for other industries such as radioactive waste and CO2 containment **Design Solutions for nZEB Retrofit Buildings** Rynska, Elzbieta, Kozminska, Urszula, Zinowiec-Cieplik, Kinga, Rucinska, Joanna, Szybinska-Matusiak, Barbara, 2018-03-02 Construction projects once they are completed are intended to exist in the skylines of cities and towns for decades Sustainable technologies seek to take these existing structures and make them environmentally friendly and energy efficient Design Solutions for nZEB Retrofit Buildings is a critical scholarly resource that examines the importance of creating architecture
